

Gastroenterology Lab

The **CHRISTUS Ochsner St. Patrick** Gastroenterology Lab (GI) is newly renovated to provide you with high-quality, innovative care here in the Southwestern Louisiana communities. We've invested \$2.5 million in this renovation, so we can provide you with faster and more accurate diagnostics. Our lab spans 6,100 square feet and includes four advanced procedure rooms with cutting-edge capabilities. Your comfort matters, which is why we've also invested in the latest endoscopic equipment that offers minimally invasive techniques.

Our GI Lab can treat a variety of digestive disorders, such as gastroenteritis, gastroesophageal reflux disease (GERD) and diseases related to the liver, pancreas and gallbladder. We have you covered, no matter what GI disorder you are facing.

Additionally, this newly remodeled lab centralizes a wide array of procedures, exams and innovative equipment, so you can receive care all within one suite. Some of the procedures include esophageal dilation, colonoscopy, therapeutic endoscopic services and enteroscopy.

The renovated CHRISTUS Ochsner St. Patrick GI Lab empowers our physicians to treat GI issues utilizing advanced technology.
