

e-Bridge

Communication Platform

With the e-Bridge communication platform, EMS and hospital teams experience quicker patient handoff, better communication between care teams, automatic recording and reporting of patient data, and so much more. Get to know e-Bridge's functions and features, the value and benefits users see, and real-life examples of e-Bridge ROI.

What does e-Bridge do?

The e-Bridge communication platform enables live HIPAA-Secure communications between and among EMS and hospital teams through sharing pictures, audio, video and live streaming. It provides audio and visual alerts and notifications with real-time ETA tracking and allows 12-lead management from any monitor.

Choose the solution that works for you:

Alert provides quick pre-arrival alerts from EMS to hospitals, including ETA tracking.

Connect enables text, voice, video, telehealth video and data sharing between EMS and hospitals. Includes Alert capabilities.

WorkFLOW is a case management platform that allows for enhanced information and data communications between EMS and hospital teams, including live video conferencing. Includes Connect capabilities.

Visit is a direct-to-patient telehealth solution for EMS and hospitals to manage patients remotely.

Interpreter connects patients to medical interpreters through live video, supporting a wide variety of spoken languages and ASL.

D-Scribe X empowers managers with full logging and access to all pre-hospital and hospital voice communication, images, data and reports.

Value you will gain with GD e-Bridge:

- Enhanced cross team communication
- Resolve disputes and prove patient treatment refusals
- Quicker patient handoff
- Virtually place physicians at the trauma scene
- Event case management
- Automatic recording and reporting of patient care data
- Online medical control
- Better communication between care teams
- Easier activations of specialty care teams

Tools that are configurable to your needs with a suite of highly configurable extensions, e-Bridge allows users to tailor its interface, alerts, buttons, workflow, and more.

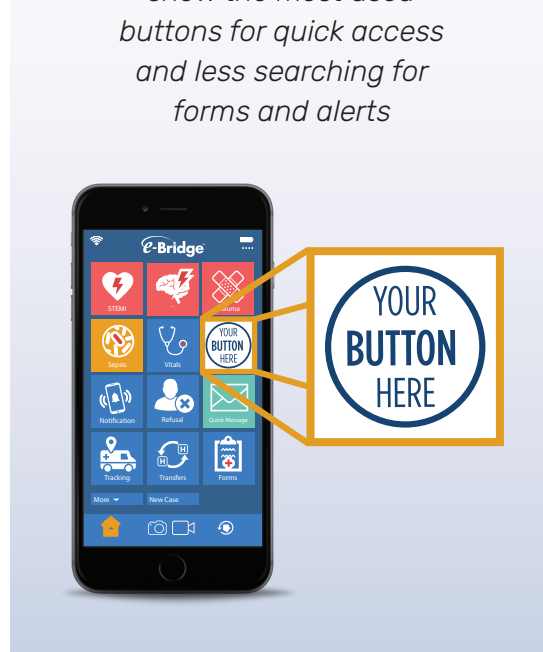

Forms:

Configure forms to capture patient data, vitals, specialty care information, symptoms, refusals and more that allow for tailoring to meet county and stakeholder requirements

Interface:

Configure interface to show the most used buttons for quick access and less searching for forms and alerts

Workflows:

Configure events to track as they happen and patient demographics to be captured by any member assigned to the case

Interoperability

Streamline and Share Data

Today's ePCRs, EMRs, EHRs, etc operate independently. This leads to data entry, redundancy, unnecessary data transport, data error, and incomplete data. GD can work with you on creating a single, unified, and bidirectional data stream.

Benchmarking

Continuous Performance Improvements

As a hospital or EMS organization, you want to be able to benchmark your metrics to assess ongoing performance for improvements, training, and accreditations.

Feedback

Closed-loop Performance Tracking

The best way to understand what is working and what is not, in order to make improvements, is by gathering team feedback.

ROI:

- Baystate Medical Center decreased door-to-balloon time by **15 minutes** and reduced costs of 12-lead storage by **\$8,000**
- Naperville Valley Fire Department decreased time-to-treatment by **20-30 minutes**
- Southeast Health Medical Center decreased door-to-needle time by **15 minutes (20%)** and improved their door-to-physician time by **29%**

Benefits:

- Telehealth for ET3 payment models
- Better preparedness for incoming patients through improved communications
- Quicker and more efficient patient hand-off
- Faster time-to-treatment
- Real-time communication of case to entire team
- Improved quality assurance with voice and data logging and recording
- Cost and time savings on activations
- Fully configurable and scalable
- EMS Feedback Loop
- Improved quality assurance with voice and data logging and recording
