

Product Comparison

Blue Onion vs. Celigo

CORE CATEGORIES		
Payment Processor Support	Only connects with Shopify & Amazon.	Direct integration with dozens of payment processors including Adyen, Affirm, Afterpay, Amazon Pay, Authorize.net, Braintree, Catch, Global-e, Klarna, PayPal, QuadPay/Zip, Sezzle, Shopify Payments (Shop Pay/Cash), and Stripe.
Timing	Date of transaction - adjustment needed at Bank Received Date.	Bank Received Date - no adjustment needed.
Accuracy	One variance GL account for all non-sale/fee transactions and one GL account for fees. This makes it difficult to investigate discrepancies.	Granular Chart of Accounts mapping based on all payment processor payments, including gift cards, chargebacks, marketplace facilitator tax activity, reserve balance changes, and more. Advanced clarity across balance sheet and P&L for all transactions and the details within each transaction - leaving no room for unmatched data.
Transaction Type Support	Deposit push only - no support for invoice or credit memo payment records.	Deposit or Journal Entry push, support for payments, and credit memos. More NetSuite transaction type support.
Custom Field Support	No field mapping on deposits for department, location, or other fields.	Support for custom field mappings, including department and location. Static and reference field mapping to any NetSuite field, based on originating order or payment processor data.
Automated Push	Yes.	 One-click push for all payouts - Automated Push is Coming Soon!
