

CHALLENGE #1

Operations

Do you spend more time fixing problems than you do fine-tuning your fleet's performance? Inefficient tools and incomplete data can hold you back from tracking your fleet, managing fuel usage, maintaining vehicles, and more.

SOLUTION

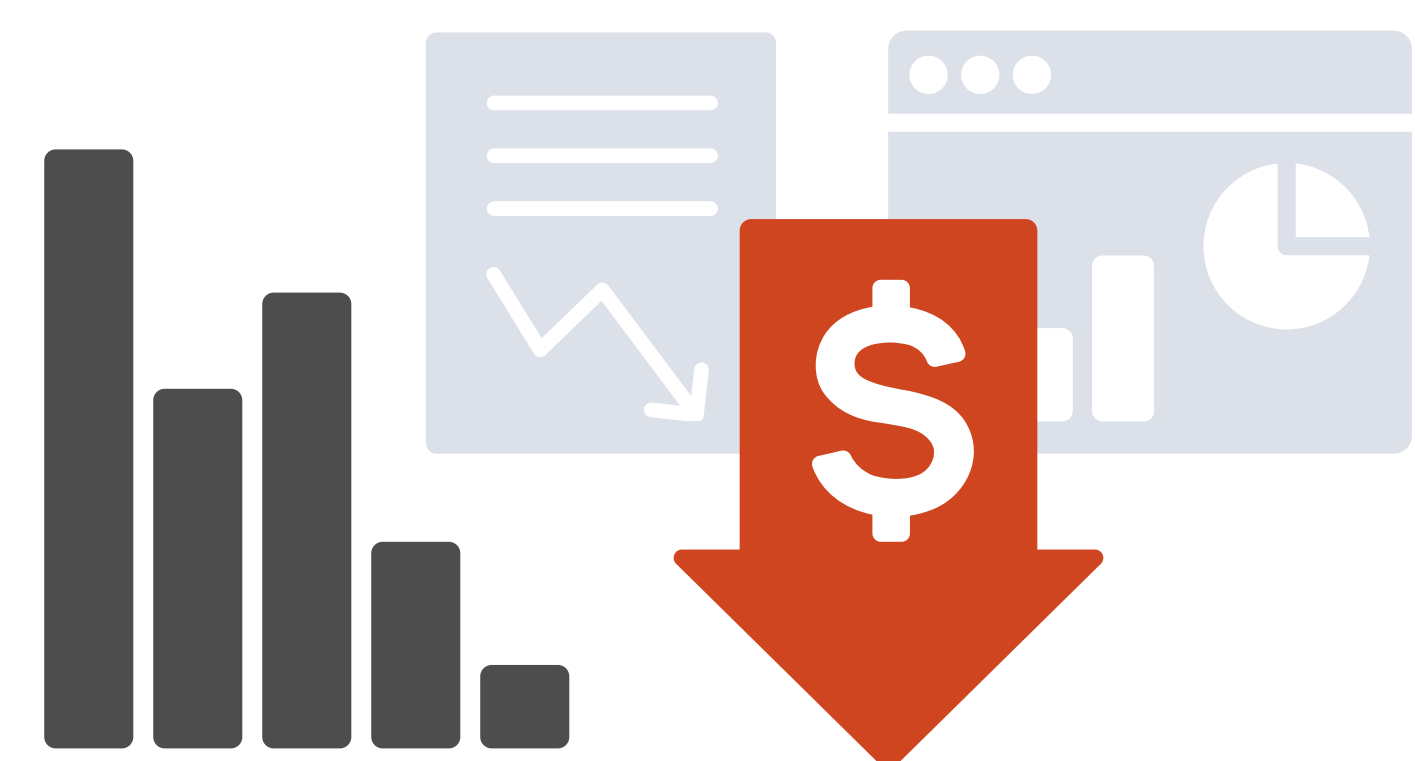

An all-in-one, integrated solution saves time and maximizes resources by managing fleet operations with real-time data from a single dashboard.

CHALLENGE #2

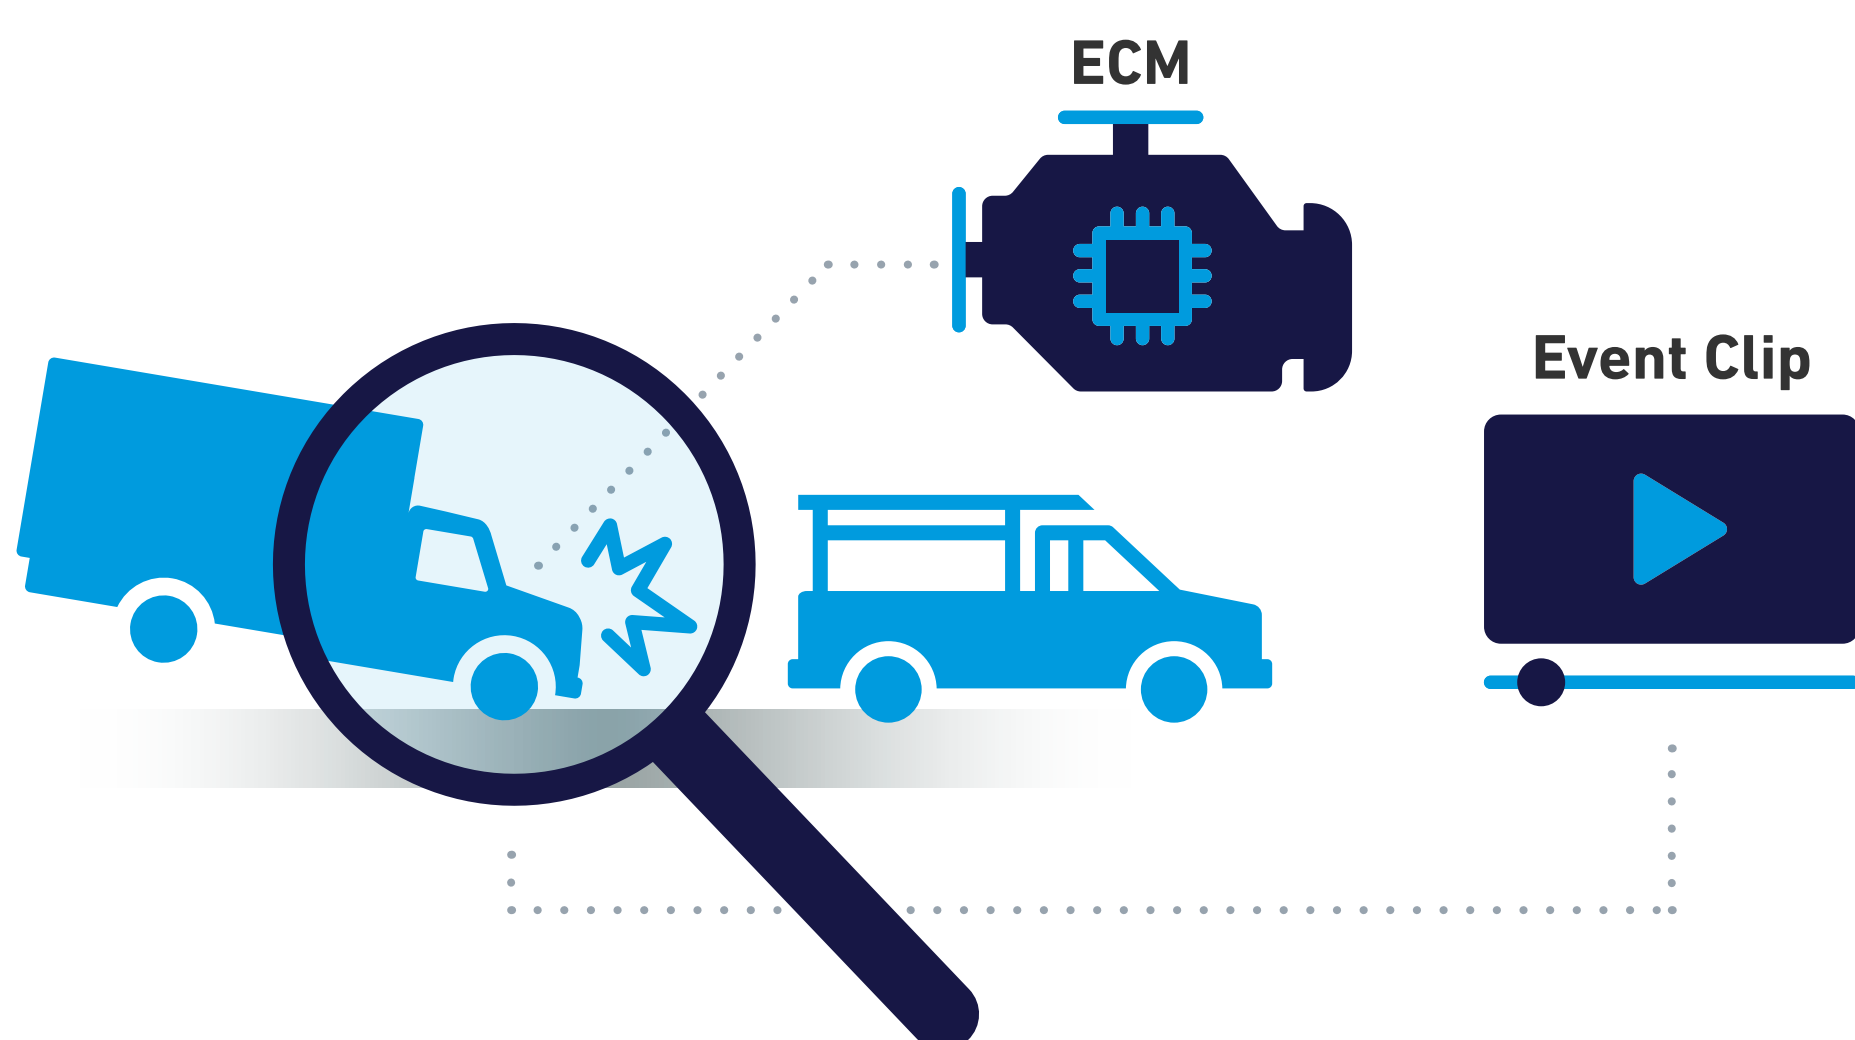

Budgets

Operating on a tight budget? Find innovative ways to eliminate excess, oversights, and inaccuracies that cost your company money.

SOLUTION

Discover what caused a collision or service issue, help reduce claims and call-backs, and strengthen fleet safety and efficiency with real-time video and data. Gain critical insights for optimizing routes, fuel usage, and cost savings.

CHALLENGE #3

Vehicle Maintenance

Without timely maintenance, fleets face unplanned and unnecessary downtime that slows down your whole operation. Can you really afford the revenue loss from an out-of-commission vehicle?

SOLUTION

Tools like Diagnostic Trouble Codes (DTC) and Preventative Maintenance notifications help you stay on top of your vehicles' health.

CHALLENGE #4

ELD

Staying on top of regulations and industry standards and proving compliance can be a full-time job. ELD mandate, DOT requirements, HOS recordkeeping—it's a lot to track, especially if you're still using a paper filing system.

SOLUTION

Integrated, web-based digital management tools can automate processes and take the guesswork out of compliance management. Improve your CSA scores, reduce risk, and simplify HOS and DVIR reporting.

CHALLENGE #5

Workforce

Finding new talent pools of drivers and workers and the proven methods to train and engage them is an urgent and ongoing need.

SOLUTION

Modern fleet management systems are built to help hire, train, and retain. Leading-edge tools empower drivers and workers, using video telematics to efficiently coach safe driving, detect risk, and manage overall productivity.

At Lytx, we build technology designed to help managers run efficient, high-performing fleets, regardless of size.
