Worried About Water in Your Basement? EverDry Can Make Your Basement Dry Again—For Good

It's a terrible feeling to walk downstairs and find water where it doesn't belong. Maybe you've noticed a damp smell that won't go away, a small puddle after every storm, or cracks along the basement wall. What starts as a minor nuisance quickly becomes a constant worry—what's causing it, how bad it is, and what it's doing to your home.

You shouldn't have to live with that stress, and you don't have to. At EverDry Waterproofing of Central Indiana, we help Indianapolis homeowners transform basements that are damp, musty, or unsafe into dry, healthy spaces you can actually use. We find the source of the water problem and solve it for good, so you can protect your home from future water damage.

We've helped thousands of local homeowners turn damp, musty basements back into safe, usable spaces again. Whether you plan to finish storage, work, or family space, your basement should never be something you worry about. Your home should feel safe, solid, and dry. Schedule your free inspection for **basement waterproofing in Indianapolis, IN**, and let's get your home back to the way it should be.

Meet EverDry, the Top Waterproofing Company in Central Indiana

Your home is where life happens—where family gathers, memories are made, and where you should always feel safe and comfortable. You want to protect your home, but where do you start? How do you find a basement waterproofing contractor you can trust?

We know there are plenty of horror stories out there, but there are also thousands of satisfied customers who've worked with honest, experienced basement waterproofing companies like the EverDry Waterproofing of Greater Indiana.

Here's what sets us apart and why homeowners continue to choose us:

Locally Owned and Operated

We've been protecting homes in Central Indiana since 1978. As a **local basement waterproofing company in Indianapolis**, we're also backed by the nation's largest waterproofing network. That partnership gives us access to proven systems, industry-leading materials, and decades of technical expertise, all while keeping our service rooted right here in the community.

Full Waterproofing and Repair Services

We handle everything under one roof—basement waterproofing, crawl space waterproofing, crawl space repair, foundation waterproofing, and full foundation repair solutions. When water is getting in, we'll find the best way to stop it and restore your property.

5-Star Reviews and an Excellent Reputation

We're proud to maintain an A+ rating with the Better Business Bureau, earned through decades of dependable work and genuine customer satisfaction. Our **reviews** say it best—homeowners appreciate how quickly we get the job done, how thoroughly we clean up, and how respectfully we treat them and their homes from start to finish.

Experienced, Certified Crews

We hire the best people and make sure they stay that way. Our technicians are highly trained, certified, and continue learning the latest methods in basement waterproofing and foundation repair. They're professional, friendly, and take pride—people you'll feel comfortable having in your home.

Fair Pricing and Financing

We don't sell what you don't need. You'll get honest recommendations, clear explanations, and convenient **financing options** that make it easier to move forward now with the work you need to protect your home and your family.

Proudly Serving All of Central Indiana

We provide basement waterproofing in Indianapolis, Greenwood Marion County and the greater Central Indiana service area. Whether you're in the city or in nearby communities, our team is here to help you protect your foundation, stop water at its source, and keep your home dry and healthy for years to come.

If you're searching for **basement waterproofing near me in the Indianapolis area**, we work all across the local area in Broad Ripple, Fountain Square, Meridian-Kessler, Nora, Washington Township, Irvington, East Side, Lawrence, Southport, Beech Grove, Garfield Park, Speedway, and more. We're proud to provide the basement waterproofing Indianapolis, IN homeowners trust the most.

Wet Basement? Here's What's Causing It

Why is there water in my basement? It's what you want to know, and what we'll find out. Basements are naturally prone to moisture, especially here where heavy rain, melting snow, and shifting temperatures create constant challenges for homes of every age. Excess water around your foundation increases pressure in the surrounding soil, pushing moisture through even the smallest gaps in concrete walls or floors.

Common water problems like clogged gutters, poor grading, and outdated drainage systems make things worse. When water pools near your house, it slowly seeps through cracks and joints, leading to leaks, high humidity, and eventually, further damage to your foundation and structure. Inside, poor ventilation and missing vapor barriers can cause humidity levels, creating perfect conditions for mold growth and musty air.

Signs of a Basement Moisture Problem

While some of these are obvious, others may not be. Knowing what to look for early can save you time, money, and stress later. Here are some of the **common basement problems** that we see.

- **Damp or Wet Walls:** If you see dark patches, streaks, or peeling paint on your basement walls, water is finding its way through the foundation. Over time, this can cause efflorescence, mold, and structural weakening.
- **Efflorescence:** That white, chalky residue on your walls isn't just dust—it's minerals left behind when moisture moves through the concrete and evaporates. It's an early warning that water pressure is building behind your walls.
- **Musty or Stale Odors:** A damp, earthy smell means moisture has been trapped for a while. It's often the first sign of hidden leaks or poor ventilation—and it can affect the air quality for everyone in your home.
- **Mold and Mildew Growth:** Spots that are black or green spots on drywall, floors, or stored boxes, it's a clear sign that excess humidity or leaks are feeding mold growth. Mold spreads quickly and can be harmful to breathe in.
- **Cracks in Walls or Floors:** Even small cracks allow water to sneak in. They often widen over time as soil expands and contracts, letting in more moisture and increasing the risk of further damage to your foundation.
- **Standing Water or Water Damage:** Puddles after rain, damp floor joints, or recurring wet spots mean your waterproofing system or drainage isn't doing its job. Left alone, this can lead to long-term erosion and mold problems.
- **Rust on Metal Fixtures:** If your water heater, furnace, or metal shelves start to rust or turn brown or orange, it's an easy path straight into your basement. It's common during heavy rain or snowmelt, especially in older homes with aging seals.

Not acting fast enough when you have a **wet basement** gives moisture time to spread—and once it does, the repair costs go up fast. Professional basement waterproofing ensures that these issues are not only resolved but also prevented from returning.

How We Waterproof Basements: EverDry's Basement Waterproofing Services in Indianapolis, IN

At EverDry Waterproofing of Greater Indiana, we know how stressful a wet basement can be. Whether it's a small leak or standing water after every storm, it's something no homeowner wants to deal with. That's why our waterproofing contractors take the time to find out exactly where the water's coming from and create a plan that fits your home.

We offer several types of basement waterproofing solutions for Indianapolis homes, designed to stop water at every point of entry.

Exterior Drainage Systems

Exterior drainage systems are your home's first line of defense. They keep water from ever reaching your foundation, reducing pressure on basement walls and helping prevent seepage and cracks.

- **French Drains:** A trench filled with gravel or rock containing a perforated pipe, French drains collect and redirect water away from your home. These systems are particularly effective at preventing groundwater from accumulating near your foundation.
- **Grading and Landscaping Adjustments:** Poor grading can cause rainwater and snowmelt to pool around your home. We regrade the land around your foundation to slope away from your home, improving natural drainage.
- **Exterior Waterproof Coatings:** Applied to the outside of your foundation walls, these waterproof coatings form a protective barrier that keeps water from penetrating your basement.

Interior Drainage Systems

Interior drainage systems handle water that has already made its way into your basement. These systems work by collecting and directing water to a sump pump, which then removes it from your home.

- **Interior Perimeter Drains:** Installed along the edges of your basement floor, these channels capture **water seepage** through the walls or floors and direct it to the sump pump.
- **Drainage Channels and Floor Drains:** For homes with water coming up through the floor, we install discreet drainage systems that stop pooling and protect both your flooring and walls.

Backup Sump Pump Installations

Your sump pump is the hardest-working piece of equipment in your basement waterproofing system. But if the power goes out in the main pump fails, your basement could flood fast. That's why we install high-performance **backup sump pumps**. We like the SmartPower™ system, that automatically turn on when needed. It's extra peace of mind during heavy storms or emergencies.

Vapor Barrier Implementation

A big part of keeping your basement dry is controlling moisture before it spreads. That's why we install high-quality vapor barriers along basement walls and floors. These heavy-duty liners act as a protective shield, stopping moisture from passing through the foundation and preventing condensation from forming inside.

A **properly installed vapor barrier** does more than just block dampness—it helps prevent mold and mildew growth by keeping the air cleaner and drier. It also improves the overall energy efficiency of your home by reducing humidity, which means your heating and cooling system doesn't have to work as hard. Over time, that can even help lower your utility bills.

For finished or partially finished basements, vapor barriers provide a layer of protection between your foundation and materials like flooring, drywall, or insulation. It's a simple, effective step that helps your basement stay dry, comfortable, and safe.

Basement Sealing Plus Crack and Basement Leak Repairs

Cracks or leaks in your basement walls tell us that your foundation is under pressure. Water seeps through weak spots, and over time, that moisture can cause stains, peeling paint, and a damp, musty environment. **Basement sealing** helps stop this by closing off those openings and keeping moisture out before it spreads. In more advanced cases, the same soil pressure or settling that led to those cracks can also cause uneven floors or other structural changes upstairs. Foundation damage is not something you want to have.

Our team also specializes in **basement leak repair**. In some cases, stopping the water means also recommending additional structural repairs to stabilize your home and prevent the damage from spreading.

One of the most effective solutions we use is the Stabl-Wall™ carbon fiber system—a permanent, low-profile reinforcement that strengthens cracked or bowed walls from the inside without digging or heavy hardware.

We'll walk you through exactly what's happening, what needs to be done, and why. You'll never get a laundry list of extras—just the right repairs and waterproofing to stop the water, stabilize your foundation, and protect your home for good. Get a free inspection for the best basement waterproofing Indianapolis, IN, homeowners rely on!

Why Basement Waterproofing Is One of the Best Things You Can Ever Do For Your Home

Choosing to waterproof your basement isn't just about fixing leaks—it's about protecting one of the biggest investments you'll ever make: your home. Whether you're already dealing with water damage or trying to prevent it, waterproofing pays for itself in long-term protection, comfort, and value.

Protect Your Home's Structural Integrity

When water gets into your basement, it slowly breaks down your foundation from the inside out. Moisture seeps into tiny cracks, softens concrete, and adds pressure until walls start to bow or shift. Left alone, it can cause serious structural damage that puts your home's stability at risk. Basement waterproofing stops that cycle before it gets worse, keeping your foundation strong and your home safe for years to come.

Improve Indoor Air Quality

A damp basement doesn't just stay downstairs—it affects the air you breathe throughout your home. Moisture creates the perfect environment for mold, mildew, and allergens to spread through your HVAC system and into your living space. Our waterproofing solutions—like vapor barriers, drainage systems, and high-capacity dehumidifiers—keep the moisture out, stop mold growth, and help your family breathe **cleaner, healthier air** year-round.

Reclaim and Add Space

When your basement stays dry, it becomes part of your home again—not just a place for storage bins and old boxes. It's a space you can finish, like a comfortable family room, a home office, or extra living area without worrying about leaks or dampness. It's a smart way to add usable square footage and lasting value to your home.

Lower Your Homeowners Insurance Premiums

By reducing the risk of water damage, basement waterproofing can make your home eligible for lower insurance premiums. Many insurers see homes with waterproofing systems as lower-risk, potentially offering discounts while protecting you from costly, uncovered water damage.

Contact EverDry today for a free inspection and consultation about our basement waterproofing service in Indianapolis, IN. We can create a customized solution to make a dry basement your reality.

Customer Reviews

Linda W — September 12, 2024

I chose the "ultimate" package to waterproof my basement. I had water issues for years which resulted in my foundation settling and cracked basement walls and mold and mildew. Everdry installed their "Stable Wall" system over the cracks in my walls to stabilize them. They also installed a sump pump. The entire job only resulted in a complete change in the air quality of my entire home. I no longer have the musty and moldy smells! The crews were amazing. They worked hard and were professional. The entire job was completed in 2 days. The lifetime transferable warranty was also a big plus. It has been a year and no water in my basement. I no longer have "sump attacks" when it rains.

Carlie D — September 12, 2024

We used their services 4 years ago for waterproofing our basement due to a creek in our backyard. Any issue we had with install was taken care of immediately. We have had no problem since! Their customer service is helpful and professional as was their technicians. We have already recommended them to others who have, in fact, used them as well! Very thankful we found Everdry for our waterproofing needs!

Nicholas C — September 12, 2024

Everdry did an amazing job with our house! I bought my house from my grandma and there was water that was definitely leaking in every time it rained. A lot of water. Not only did Everdry fix that problem to where I have had no water in my basement whatsoever but they also did a lot of work to the rest of the foundation to secure that my foundation will now forever be protected too! They were in and out and game me the opportunity to feel safe using and renovating my basement. There patented system is one I can say they have perfected.
