| Subject | Monitor Your Health at Home |

Hi [First Name],

Your healthcare provider offers Remote Patient Monitoring—a way to manage your health from home while staying connected to your care team.

Instead of frequent office visits, you use simple devices at home. Your measurements go directly to your provider. They see your data in real-time and can respond quickly if something changes.

What RPM Gives You:

- Convenience—monitor on your schedule
- Real-time provider connection—no waiting for appointments
- Early detection—changes are caught quickly
- Empowerment—take an active role in your care

RPM is covered by most health plans. Setup takes minutes. It's secure, simple, and effective.

Interested? Ask your healthcare provider if RPM is right for you.

TopDocRX Remote Monitoring

Important: RPM supports your care team. Always follow your provider's guidance. This is not a substitute for medical care.
