

## Product Guide

---

We've all seen the videos, the photos. A poor polar bear, not the radiant alabaster you remember from your childhood narrated by a young David Attenborough, not even the slightly yellowing version, like old paper, but grey, a dirty, patchy grey, standing perched precariously on a tiny sliver of ice, melting like a popsicle, gazing forlornly, hopelessly at the distance. The ice caps are melting faster than a 99 (with flake, raspberry ripple) when the bottom of the cone has been bitten off, and there is nothing we can do about it.

Which is where the De'Longhi Pinguino AN112 comes in. When it comes to keeping you cool during this slow-burn apocalypse we've inherited, you couldn't ask for a better portable aircon unit. With at least a nod to the world around them, the Italian stallions have made sure to make their product both energy efficient and using ecologically natural gas. In short what this means is that there are zero greenhouse gases being emitted, leaving you a clear conscience as you chill. Well, relatively clean.

### De'Longhi Pinguino AN112: The Silent Penguin

- **LED Display** Despite being known more for their classy [espresso machines](#) and retro-looking [toasters](#), don't think that they can't design a simple but hi-tec display pattern on the top of the unit. Clearly and simply laying out the temperature, cooling mode, fan speed and timer, this means you can check at a glance what is currently going on, and programming it to give you the conditions you desire won't be like trying to programme the Death Star.
- **REAL FEEL Technology** You know the way the weather app on your [smartphone](#) shows the overall temperature, but then what it *actually* feels like, due to wind or something similar? Well this is the Italian manufacturer's own invention following that logic. It essentially combines the regular cooling attributes of the **Pinguino AN112** with **humidity control**.
- **Quiet Operation** When you include the word "Silent" in your product name, you know you better deliver on your boast. Which is thankfully what De'Longhi do here, with the device featuring a **maximum noise level of 50 db**, so if you are using this as an portable office air conditioner, then you'll barely even register it's on.

### Verdict

In case the overly dramatic open didn't make clear enough - global warming is not like Brexit. It is coming, whether we like it or not, the summers will keep on getting hotter, and not in a good way. So whether it's for work or for your home, the De'Longhi Pinguino Air-to-Air PAC AN112 Silent is a trooper - a zero greenhouse emitting, energy efficient, effective, and stylish aircon unit. While it costs a pretty penny, compare it across sellers online and you easily save **over £200** on it.
