Nue FP&A for Government Contractors

Purpose-Built Financial Planning & Analysis for Project-Based Organizations

Does your company need to confidently manage indirect rates, forecast with precision, and move beyond spreadsheet limitations? Are you looking to price more competitively, plan with more confidence, and make better decisions across every scenario?

With Nue, Costpoint users get a SaaS-based FP&A platform designed specifically for GovCon. It integrates with Deltek Costpoint to deliver fast, multi-year planning, unlimited scenario modeling, and DCAA-compliant indirect rate forecasting.

By layering assumptions over actual accounting data and incorporating pipeline projections, Nue empowers finance teams to build scalable, accurate forecasts that support strategic decision-making.

A GovCon FP&A solution

- » **Unlimited Scenario Modeling:** Quickly run complex “what-if” scenarios to support agile decision-making. “If I win this contract with 50 positions, what happens to my wrap rate? What infrastructure dollars can I add? How does this impact my KPIs?”
- » **DCAA-Compliant Forecasting:** Generate indirect rate forecasts and waterfall reports tailored for GovCon compliance.
- » **Real-Time Data Integration:** Imports trial balance and planning data and applies custom basis of estimates for dynamic forecasting.
- » **GovCon-Specific Intelligence:** Built for CFOs, controllers, and FP&A teams in government contracting environments.
- » **Excel-Free Accuracy:** Eliminates manual errors and time-consuming formula checks common in spreadsheet models.
- » **Strategic Pricing Support:** Enhances forward pricing and proposal planning with accurate, data-driven insights.
- » **Enterprise-Ready Scalability:** Built to support growing organizations—from 100+ employees to global enterprises—managing thousands of projects and complex, multi-entity structures with ease.
- » **Enhance Planning:** Use your own planning approach or Costpoint Planning, together with Nue’s pipeline module, to align resources, projects, and opportunity assumptions with real-time priorities. This helps improve forecast accuracy and proactively address critical outlook questions.
