It's Time to Rethink Automation

Meet the SOFTBOT® Platform at Automate 2022

The SOFTBOT Platform crushed it at MODEX! Crowds gathered to see how easy it is to unlock the power of automation today, not months from now. At Automate, we're bringing an even bigger booth and more bots to continue live demos of end-to-end integrations in just minutes.

New & Noteworthy

BIG NEWS:

Early Access Transport Kits

We know many of our customers have been excited to deploy automation in just days or weeks with the SOFTBOT Platform. It still wasn't fast enough for us though!

We're thrilled to announce the launch of an Early Access program, for both current and new customers, that offers a growing list of pre-configured (but flexible) Applications. The SOFTBOT Platform will deploy these Applications in less than two hours, enabling you to quickly drive more ROI out of existing automation or pilot new automation.

Early Access currently includes MiR or Fetch transport bots. By connecting IoT sensors from Banner or MyDevices, you can quickly realize value through packages like Replenishment Workflows, Waste Collection, Pallet Return, Push-to-Pick, and many other sensor-driven triggers for transport activity.

Click to learn how productivity gains and labor avoidance are easily at your fingertips.

EARLY ACCESS

SVT Named on World's Most Innovative Companies List for 2022

In case you missed it, SVT was named one of Fast Company's World's Most Innovative Companies of 2022!

The [Fast Company list](#) showcases businesses "whose efforts are reshaping their industries"—where our revolutionary SOFTBOT Platform easily sits. And we're just getting started. Check out our new awards page to learn more!

Industry Insights

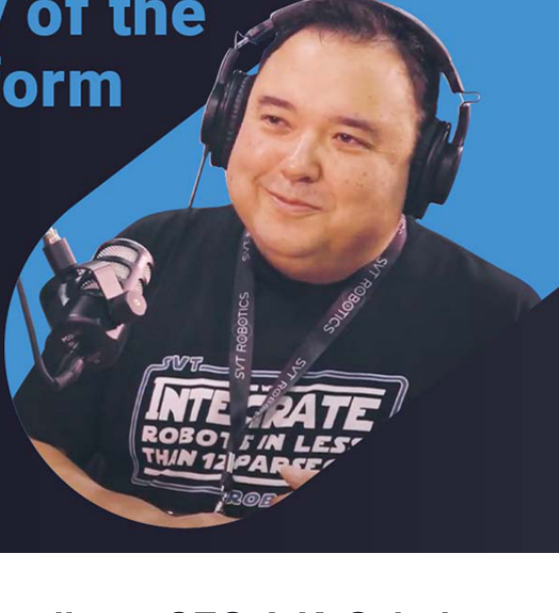

With SVT Robotics' combined automation industry and product development experience numbering into a couple centuries and billions of dollars in deployments, we might know a thing or two about integrating automation!

In the podcast and article below, CEO, A.K. Schultz, and SVP of Growth, T.J. Fanning, discuss why SVT came away from Modex leading the pack for robotics integration, and the new accessibility of automation. Two industry experts with insightful info to share - check it out!

The inevitability of the SOFTBOT® Platform

A MODEX-success podcast with SVT CEO, A.K. Schultz

SVT ROBOTICS

The New Warehouse Podcast talks to CEO A.K. Schultz at MODEX 2022 about their Softbot Platform.

Leadership Pen

How do you recruit for a company that's in hyper-growth mode and leading the next industrial revolution? Great question. I accepted that challenge when I joined SVT Robotics as their first Head of Talent. Two years later, at 75 employees (5x larger than when I started), we now have people on each coast, and just hired our first Canadian!

As a company disrupting the supply chain industry by challenging, and simplifying, how automation integration has always been done, we're building SVT with growth-mindset employees who want to level up the robotics industry; recruiting the right talent makes our solution come to life. That opportunity to innovate is what initially attracts people to SVT, but it's our team that keeps them here. We have a passion for entrepreneurship, and we aren't afraid to fail fast to learn faster. Most importantly, we rely on each other to be exothermic – giving off more energy than we require to do our jobs.

Our employees get to create new products and grow a company that is riding the rocket ship to the future of automation. Come join us!
