## Enable your business to work more effectively

### Samsung Knox

Introduce your business to more good days with Samsung Knox by making it easy to integrate, manage, customise and secure mobile devices throughout your organisation.

#### **Knox is switched on and ready to work from the word go**

Your devices come fully configured and ready to go from day one, with each user's specific settings in place and available to use straight away.

#### **Knox Custom Configurator (KCC)**

With KCC, all your apps and programs are already installed on the device and ready to use from the moment you first turn on your smartphone or tablet.

#### **Knox Mobile Enrolment (KME)**

Easily enrol multiple Samsung Knox devices into your Enterprise Mobile Management system (EMM) safely and securely over the air. No user input is needed, no secure information is shared, and no Google account information is required.

With KCC you can easily add and remove apps, change the design and layout of the home screen, alter connection settings and more – across all your employees' mobiles and tablets.

## Best-in-class Security

Knox uses a multi-layered security system that makes it virtually impossible for unauthorised access to your device's data. In fact, the platform is so secure it meets the stringent security standards of over 26 governments and is the most accredited mobile security platform available.

Knox performs multiple checks to ensure that your device is running according to spec from the moment it's switched on to the time you turn it off.

## Mobile Management Made Easy

Samsung Knox enables 50% more capability on your smartphones and tablets. It supports many more Application Program Interfaces (APIs) than the standard Android OS to unlock the full enterprise capabilities of your Samsung devices.

We also work closely with Android to develop our own Software Development Kits (SDKs) to make sure you get the most out of your smartphones and tablets. With so many APIs available, your IT department can manage devices down to the smallest detail – without ever being able to access employees' personal data.

Here are just some of the MDMs Knox supports:

## Customised for Your Company

Knox Customisation offers a set of powerful tools that enable you to customise your Samsung smartphones and tablets to serve specific objectives – so you can brand your devices to suit your business and set them up to perform defined tasks – the possibilities are endless.

All customisation is set by you to help benefit your business – your chosen settings remain safe and secure and can't be changed by customers.

## One device, multiple environments

Knox Workspace is built into each device, protecting employees' private files and encrypted work data by storing them in separate containers (depending on your MDM). By creating separate environments, employees' personal info and work data will never come into contact with each other.

Your IT department can remotely manage your work container (install new apps, apply new security policies), but are unable to access any personal data.
