

Introducing the new A5

Superseding the S6

We're saying goodbye to the S6, but fear not – the A5 brings even more good days to your business at an affordable price!

An all-weather performer

The S6 didn't like to venture out into the rain, but the A5 is designed differently. With an IP68 water-resistant rating, it can be used safely during a downpour and is well protected from accidental spills during a business lunch.

We've upgraded your office

32GB can be a tight fit for all your phone's files, photos and apps. So the A5 matches the S6's internal storage, plus lets you add up to 256GB of additional space via a MicroSD card – making it easy to keep important files handy and practical to work out of the office.

Longer lasting, harder working

The A5's battery has more capacity than the S6's, so it lasts longer off a full charge. It works harder to ensure you've got enough power to complete tasks and communicate effectively throughout the day – without a recharge interrupting your flow.

Always alert

The A5 is every bit as secure as the S6. Knox defence-grade security is built into the smartphone providing real-time data protection. Plus, you can securely and conveniently lock and unlock your smartphone using your unique fingerprint.
