

Enterprise Mobility

You can have thousands of apps, but only one identity to manage with Azure Active Directory Premium, included as part of Microsoft Enterprise Mobility Suite. Watch this two-minute video to see how you can manage identities across your datacenter and the cloud, and then provide secured single sign-on to all of your apps with Azure Active Directory Premium.

Respond to the challenges of multiple employee devices, compromised credentials, and suspicious user activity. Azure Active Directory Premium simplifies identity and access management for IT with a single identity for each user, secured with additional levels of verification.

Plus, you can apply additional validation such as Azure Multi-Factor Authentication and conditional access policies, monitor user activity with advanced security reporting, and set up audits and alerts. You can also give users self-service options to reset passwords or request access to apps without needing IT help. Ready to try it now?
