

Put Food Smarts Into Practice

Take your students on a food journey this year with [FoodSpan](#), a free curriculum from the Johns Hopkins Center for a Livable Future.

[FoodSpan](#) includes **17 student-centered lessons**, **100+ activities**, and **project-based learning** opportunities that teach high schoolers how their food choices affect social equity, the environment, and their health. Plus, a culminating **service learning project** challenges students to identify a real-world food system issue and design a solution.

Lessons are **standards-aligned** for easy curriculum mapping and applicable to high school classes in science, health, social studies, environmental studies, and more.

Changing minds about food can change lives—when choosing your classroom projects this back-to-school season, choose [FoodSpan](#)!
