

"Seeing is believing" - learn about our new AI Tools

Wong, David F. (TR Exec)
Chief Product Officer

[Canadian-French](#) | [Portuguese](#) | [Spanish](#)

Some say that “seeing is believing” -- so I’m excited to share a few videos and demos we’ve created to show how the new Generative AI-enhanced skills in our products are transforming the way legal professionals work.

[We recently announced](#) the launch of [AI-Assisted Research on Westlaw Precision](#) and the upcoming launches of **CoCounsel Core** and **Generative AI capabilities into Practical law**. These tools will utilize industry-leading, trusted content from Thomson Reuters to search statutes, cases, regulations and resolve queries – what took hours will now take minutes. This is the start of our plan to offer legal customers a single AI Assistant across all our products, including WestLaw Precision, Practical Law, Document Intelligence and HighQ.

You can read the press release to learn more.

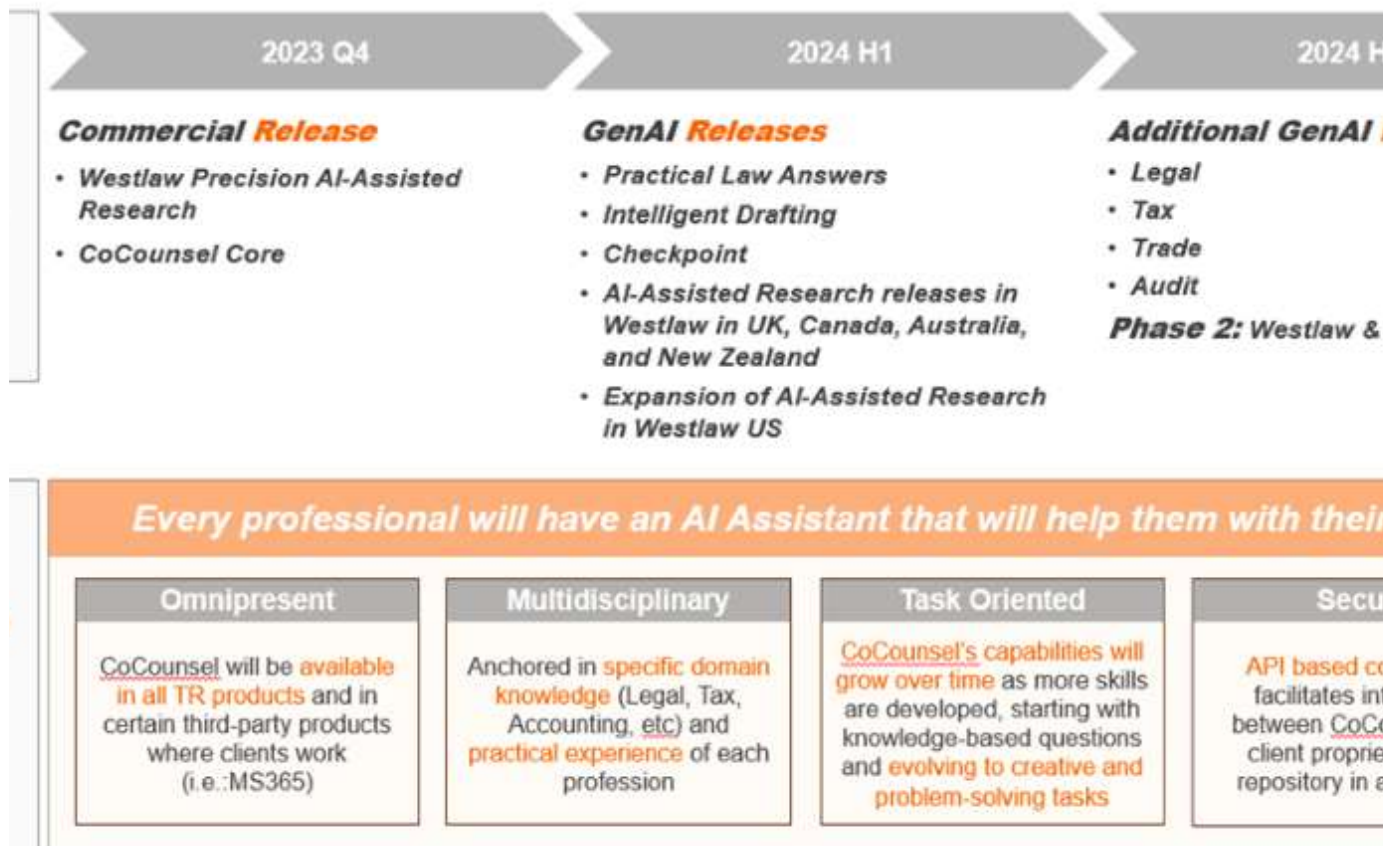

To get our customers excited, our marketing team developed a short [“sizzle reel”](#), and I’m excited to share [the recording](#) of the customer webinar that was held today. In it, you will see our product leaders show how the new Generative AI-enhanced skills in our products are transforming the way legal professionals work. You can learn more by watching our [full demo](#), and by joining the [All Hands on November 16](#) where we’ll share more details.

[An Exciting Year in 2024](#)

It’s amazing that we’re ending 2023 on such a high note, but there is even more to come.

Below you'll see our Generative AI Product Roadmap and our intentions to release more Generative AI features throughout 2024. Although we started with AI in legal, in 2024 we anticipate introducing features that will help our Tax and Corporates customers. In fact, we shared some [interesting proofs of concepts](#) for Tax & Accounting and Corporates at Synergy last week.

Gen AI Product Roadmap

Building Better: The Thomson Reuters Gen AI Platform

We've stressed the importance of our build, buy and partner strategy for AI and that staying ahead requires consistent emphasis on all three.

One of the challenges we've needed to face is how we build, design, and deploy breakthrough Generative AI skills at unparalleled speed. Thanks to our partners in O&T and our new colleagues at Casetext we are building the Thomson Reuters Gen AI Platform. We started creating the platform two years ago, and it will allow us to easily build AI functionality and "build once, activate everywhere" that functionality across products. This means that, instead of building features for only one product,

we'll now build features that can easily and safely be applied to multiple products, benefitting customers in *all* our segments. You can learn more from our [recent press release](#).

I want to thank everyone for the amazing work that's going into advancing our AI agenda. We should all be incredibly proud of how quickly we're moving and how we're continually proving that Thomson Reuters is an industry-leading technology company.

If you have any questions, take a look at our [employee FAQ](#).
