Welcome to the monthly ShipHero Fixes & Features email. Our Product Team has been working hard to bring several new and impactful fixes and features to life.

New Fixes for May 2023

New Automation Rule Trigger - All Product Dimensions in inches

- As a complement to "Any Product Dimension in inches" you can now trigger a rule if all product dimensions match the condition. A use case for this would be if you want to set a custom box for an order, but need to ensure that no products have any dimension bigger than the box.

Preventing Invalid Shipping Dimensions

- There's a new setting on [App.ShipHero.com](https://app.shiphero.com): Prevent Invalid Shipping Dimensions. This will prevent an order from being shipped (in single order and SIB) if all dimensions are at or below 1 inch. This will not apply if the shipping method is set as a generic label.

Replenishment Mobile Updates

- Filters on the mobile app have been updated to create a cleaner UX. Plus, we added the ability to replenish product cases.

Cycle Count Updates

- Added the ability to unlock locations from the UI
- New cycle counts default to the top of the dashboard

New Fixes for May 2023

- Fixed an issue where Bulk Ship Labels were printed automatically in error
- Fixed an issue where labels could not be generated for domestic orders when TAX ID was null for DHL eCommerce
- Fixed an issue where the Inventory Value report was not working
- Fixed an issue with Mobile where 3PLs were not able to upload pictures
- Fixed an issue where Amazon store was not receiving the shipment information
- Fixed an issue where Amazon Fulfillments pushed to the store were failing for build kits
- Fixed an issue where the Shipping Labels fee was not captured on the bill
- Fixed an issue where Label and custom doc were showing different incoterms
- Fixed an issue where Woocommerce Orders with Kits were not marked as "Complete" after being fulfilled
- Fixed an issue where Components from Regular Kits in Backorder status were not shown on the Product Page
