As a multi-material, maximum-recycling enterprise, Campine is focused on shrinking the planet's waste mountain to **create a zero-waste society**. Finding technological synergies help reduce ecological footprint, stimulate biodiversity, and fuel eco-initiatives across its organization.

"Campine is one of the few companies effectively recycling and producing metals, chemicals and plastics. We are moving towards a higher material recovery rate in our recycling processes and foresee **double digit growth rates per year in plastics recycling**."

**Willem De Vos,** CEO
Campine NV

## In a nutshell
RISE Sustainability Essentials Package enables a seamless ERP integration and empowers sustainability management via streamlined data collection, analysis, and carbon footprint calculations, paving the way for the SAP Green Ledger, further advancing sustainability initiatives.
