Sustainable ingredients are a top priority for Adam Foods, which needed a single data source for integrating sustainability data across its business operations to address and comply with global environmental regulations.

"SAP Responsible Design and Production improved our packaging data visibility by creating one master data source. We can now generate tax forms in-house to meet Spain's plastic tax mandate and proactively prepare for upcoming regulations affecting our business in Portugal, Hungary, Romania, and Poland."

Isidro Rodríguez Ureña, IT and Digital Transformation Lead, Adam Foods

In a nutshell

With SAP Responsible Design and Production enabling a single source of packaging data, Adam Foods can now track regulatory impacts, optimize materials for sustainable packaging, and efficiently manage and meet Spain's plastic tax obligations in compliance with EU regulations.
