

Mattoni 1873 is a beacon of sustainability within the beverage industry, **inspiring a circular future** with its universal deposit system where every bottle and can finds its way back into the production cycle, closing the material loop.

“We are dedicated to protecting underground resources, promoting biodiversity, and embracing the principles of a circular economy. Mattoni strives for full circularity in beverage packaging. The cans we use are fully recyclable and already contain 70% recycled aluminum.”

Alessandro Pasquale, CEO and Owner
Mattoni 1873

In a nutshell

SAP Sustainability Footprint Management enables comprehensive decision-making via automated carbon emission calculations, improved data quality, and integrated intelligence based on a verifiable, single source of truth.
