

Camille Ragin, PhD, MPH
Associate Director of Diversity, Equity & Inclusion
Professor, Cancer Prevention & Control Program

WE DISCOVER. WE DELIVER.

For more than 100 years, researchers at Fox Chase Cancer Center have been making groundbreaking discoveries that deliver better cancer care. With world-class scientists and clinicians like Dr. Camille Ragin, we are on a mission to improve human health.

Dr. Ragin's research focuses on identifying the contributing factors for cancer disparities among people of African descent – including race and ethnicity, social determinants of health, and biology/genetics. She proudly dedicates her life's work to serving systematically underrepresented populations where the burden of cancer is high, driving more effective intervention and addressing of disparities for future cancer prevention. Her current projects include a worldwide, multi-site genomic study of Black patients with breast or prostate cancer.

That's the power of the research happening every day at our NCI-designated Comprehensive Cancer Center. Here, very bright minds come together to create better medicine. Be part of tomorrow's cancer care today:
