Open UH Works sequence	
	Moi is a delicious fish once fed to Hawaiian royalty, but its population is at dangerously low levels.
	UH Sea Grant is experimenting with open-ocean mariculture. They've successfully grown moi at depths of 50 to 100 feet in an offshore "sea cage."
	It provides an alternative way to increase the moi population without hurting the ocean environment.
Close	This is Shawn Ching with another way UH works for all of us.
