

Let's Electrify Transportation Together

Join the TVA Fast Charge Network program to help propel the region toward an electric vehicle (EV)-driven future!

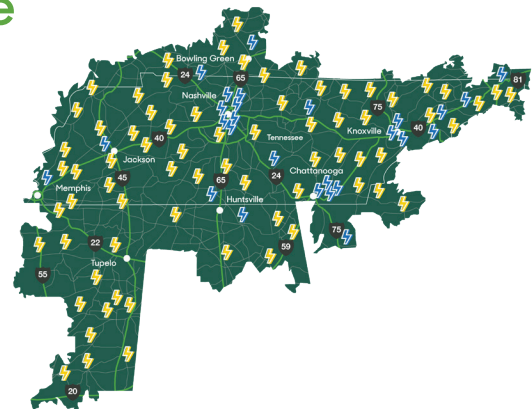

Collaborate to transform

Your local power company (LPC) can accelerate the EV movement in the Valley along with automakers, charging developers, government and transit agencies and rideshare companies. As partners in the Fast Charge Network program, your collective efforts will support these goals:

- Install fast charge stations every 50 miles throughout the Valley by the end of 2025 to eliminate range anxiety as a barrier to EV adoption.
- Create a foundational network of public fast charging stations along major travel routes to invigorate travel and spending in our cities and towns.
- Deploy 200,000 EVs to the seven-state area by 2028.
- Save our consumers \$200 million per year in fuel costs.

Plug in and connect across communities—50 miles at a time

Which resources will TVA provide?

- 80% of eligible costs, up to \$150,000 per fast charger (two-to-four per site)
- Opportunity to contribute to safer living conditions and a cleaner planet by reducing carbon emissions
- Installation specifications and program guidelines
- Coordinated media and promotional efforts
