

COMPREHENSIVE COVID-19 SOLUTIONS IN THE NOW NORMAL

EMERGING FROM THE IMPACT OF COVID-19

We all look forward to getting back together—to work, play, travel, and family.

Why keep testing? Proactive solutions provide safety nets against the risks that remain:

- Vaccinated people can still carry the virus
- No one knows how long current vaccines will be effective
- US vaccination rates are too slow to outpace new variants
- Now expert consensus US will not reach “herd immunity” any time soon

What’s in it for your work, education, event, or travel environment?

Brand **protection**—there’s a lot at stake if your workplace is the one with the outbreak

Liability **insurance**—health on site is increasingly a shared employer/public health responsibility

Worker/student/parent/athlete **trust** in employer or organization

*Science needs time
to combat variants,
prove vaccine
longevity, and
improve preventive
medicine*

**WE WILL HAVE
TO STAY VIGILANT.
BUT WE DON'T
HAVE TO STAY
HOME.**

The goal now is testing for negative – ensuring the spaces we occupy together are COVID-19 free and stay COVID-19 free.

Customized risk mitigation can include any combination that’s right for your site:

- People testing—PCR, antigen, antibody, pooled sampling
- Early detection—Wastewater, surfaces, indoor air, worn mask
- Support—Process audits, training, safety certification

Eurofins: Innovation, agility, customized service, and the highest standards of scientific excellence.

So we can all thrive again.

- ✓ Eurofins conducted more than 24 million COVID-19 PCR tests in its laboratories between March 2020 and May 2021
- ✓ More than 50,000 employees in nearly 1000 laboratories
- ✓ 30+ years of infectious disease testing experience

Eurofins is Testing for Life. Let’s find your solution.
