These household names offer more than bargains, Adam. They offer lessons from being breached.

Here's what they learned from using single-factor authentication:

- It depends on password strength—and weak or reused passwords make it easy for cyber-attackers to break in.
- It offers no backup security layer—and without it, attackers can gain access to company networks, systems, and data.
- It can lead to identity theft, massive data compromise, business disruption, and millions lost.

Keep your company off this list by moving to **two-factor authentication**—like they did. GlobalSign can help. Our whitepaper explains why your company needs it, and how we can get you there. Download it here.
