ANNUAL FIRE INSPECTION

The Importance of Yearly Inspection

REQUIRED STATE INSPECTION

Annual fire alarm inspections are **required** by Law. Lucky for you, our technicians are certified to perform these inspections to insure your fire alarms stay up to code.

We keep track of your account so when it's time, we will promptly schedule a Certified Technician to complete your yearly inspection.

Contact iTech - Advanced Alarm to schedule your inspection.

WHAT IS FIRE ALARM TESTING?

Fire alarm inspections/tests involve checking on and testing all devices that make up a fire alarm system. This includes:

- **Initiating devices**: smoke detectors, heat detectors, duct detectors, beam detectors, etc.

- **Notification devices**: horn strobes, chime strobes, speaker strobes, mass notification systems, etc.

- **Sensitivity**: checking that the sensitivity of the initiating devices is within the manufacturer's design.

- **Fire alarm panel**: the panel also undergoes regular inspection and testing.
