

# Photography

**Pictures are part of our daily lives.  
Engaging stories are accompanied by  
well-crafted photos. Photos are fun to make, and informative.  
There are some tricks that you can use to  
capture visually appealing photos.**

Images are best captured using natural light. Light illuminates the subject. Make sure that you are not shooting the subject against the light source.

Try shooting from different perspectives. Shooting the subject from a slightly lower angle gives us a different view from the usual eye level that we are used to.

Shooting from high up gives a better perspective  
- compare with same subjects on the left.

An eye level perspective may not be as clear as  
change of perspective

Filling the frame gives better detail

Mind the  
headroom  
and the  
noseroom

**Guiding lines/Leading lines**  
These help guide the viewer's eye through the photo towards a point of interest. These can be natural or artificial lines as seen in buildings.

**Consider the background.**  
The background gives more information on the subject's surroundings. What story does the background of this image tell you?

**Capture Action**  
A subject in motion shows action and emotion.
