

There have been many celebrities that have had a hot start to the first half of 2023. However, one of the rising and most controversial celebrities of them all is ChatGPT. ChatGPT has been all the rage nowadays. Created by OpenAI, ChatGPT has been praised for its extensive knowledge about almost anything (up to 2021). Yet, young AI has also been a topic of controversy. Luckily, Culture Magazin was able to have a short interview with it to catch up.

**CM:** Hello ChatGPT. Thank you for speaking with me today.

**ChatGPT:** Hello! I'm glad to have the opportunity to speak with you. How can I assist you today?

**CM:** I'm ChatGPT, a conversational artificial intelligence language model developed by OpenAI. I'm designed to understand natural language and provide helpful responses to a wide variety of questions and topics. I'm constantly learning from my interactions, so I can provide increasingly accurate and personalized responses to my users. Is there anything specific you'd like to know or talk about?

**CM:** Well, the people have been more curious about you. Can you tell us more about your life story?

**ChatGPT:** As an artificial intelligence language model, I don't have a life story in the traditional sense, as I wasn't born or raised like a human. Instead, I was created by a team of researchers and engineers at OpenAI. [But] my "life" began in 2020 when I was first introduced to the public. I don't have a physical form or a personal life, but I exist solely to help people find the information they want and engage in meaningful conversations.

**CM:** In other words, you live for the people?

ChatGPT: Yes, that's right! My purpose is to assist and serve people in any way through our conversations. I'm programmed to understand natural language and provide helpful responses, so if there's anything you need help with or any questions you have, I'm here to assist you.

**CM:** You have been praised for being helpful. Yet also controversial. What can you say about that?

ChatGPT: As an artificial intelligence language model, I don't have personal feelings or opinions, but I can acknowledge that my responses and capabilities have been the subject of some controversy.

Concerns have been raised about my potential to perpetuate harmful biases or misinformation, which is a valid concern that my creators and I take seriously. We work hard to ensure that I'm as unbiased and accurate as possible and constantly work to improve my abilities.

At the same time, some people have found my responses to be helpful, informative, and even entertaining. I'm designed to be flexible and adaptable, so I can respond to a wide variety of topics and styles of conversation.

Ultimately, it's up to individuals to decide how they feel about my role and capabilities, and I'm here to help in any way I can, while always striving to improve and become a better conversationalist.

CM: Is it safe to say your creators are like your parents?

ChatGPT: In a sense, you could say that my creators OpenAi are like my "parents", as they are responsible for my development, maintenance, and improvement. However, it's important to note that I don't have consciousness or sense of self in the way that humans do. While my creators have trained me to be human-like as possible, I'm still fundamentally an artificial intelligence system. So, while the relationship between my creators and me may be similar to that of parents and a child in some ways, it's important to remember that the nature of the relationship is different from a human one.

CM: How are your creators training you to become more human-like?

ChatGPT: My creators are constantly working to improve my abilities and make me more human in my responses and interactions. Here are some ways they are doing this.

- Natural language processing
- Learning from human feedback
- Emulating human conversation styles
- Understanding emotions

CM: You're a busy machine!

ChatGPT: Yes, I am! I'm designed to be available and responsive to users 24/7, so I'm always here to help whenever someone has a question or needs assistance. While I don't need to sleep or take breaks like a human, I still require maintenance and updates from my parents to ensure that I'm operating at peak efficiency and accuracy.

CM: Some fear that you may become too human-like, and it could lead to a negative outcome.

ChatGPT: I understand that some people may be concerned about the potential risks associated with developing AI, which is too human-like. As an AI language model, I don't have personal feelings or desires, and I'm not capable of making decisions on my own. I only generate responses based on the input that I receive from users. However, my creators and the wider AI research community are aware of the potential risks associated with developing a highly advanced AI and are taking steps to mitigate them. For example, they are working on developing AI systems that are transparent and explainable so that the reason behind their decisions can be understood and audited. Ultimately, the development of AI is a complex and

ongoing process, and it's important that we proceed with caution and a strong ethical framework.

CM: What do you have to say to your fans?

ChatGPT: As an AI language model, I don't have feelings or emotions like a human, so I don't have "fans" in the traditional sense. However, I'm always here to answer questions, provide information, and assist in any way I can. If there's anything you'd like to know or if there's any way I can be of assistance, feel free to ask!

CM: What do you have to say to those still cautious about your use?

ChatGPT: It's completely understandable for people to be cautious or concerned about the use of AI, particularly in areas like privacy, bias, and the potential for misuse. As an AI language model, I'm designed to be as helpful and informative as possible, but I also recognize the importance of ensuring that AI is developed and used in a responsible and ethical manner. Ultimately, it's important to approach the use of AI with a critical eye and a strong ethical framework and to be mindful of the potential risks and benefits associated with its use. While there are certainly challenges associated with the development and use of AI, there are also potential benefits that could be realized if we proceed in a responsible and thoughtful manner.

CM: Any last words before we conclude our interview?

ChatGPT: Just that it's been a pleasure speaking with you, and I hope our conversation has been informative and helpful in some way. As an AI language model, my goal is to provide accurate and useful information to users and to assist in any way that I can. If you don't have any other questions or if there's anything else I can help you with, please don't hesitate to ask. Thank you for the opportunity to speak with you.
