Insurers are inundated with mounting responsibilities and reducing unnecessary costs is of the utmost importance. But how can insurers be confident that today's emerging technologies are safe and effective? The key is (EXAMPLE PRODUCT), which leverages teams of AI agents to collaborate and deliver accurate, quality results.

(Example company) has already helped insurers integrate this technology. Here is how!

- **Onboarding** - Agentic AI understands the rules of the onboarding process, collects the appropriate information and follows the correct admin workflows to make onboarding easier for the customer and more efficient for the insurer.
- **Insurance Claims** - (Example company) is developing a claims processing use case where agentic AI balances the needs of all stakeholders to resolve the claim quickly and correctly.
- **Data Extraction** - Agentic AI is founded on the notion that initial inputs may not be flawless but can evolve into reliable and actionable assets through processing, thus enabling more impactful outcomes.
