

Shopify App Reviews

A UX content strategy case study

About the product & users

Partner Dashboard

Shopify App Store

The screenshot shows the 'App listing' page in the Shopify Partner Dashboard. At the top left is the 'shopify partners' logo. The page title is 'App listing'. Navigation options include 'Add translated listing', 'App visibility', 'More actions', and 'Submit app'. The main heading is 'Get IntelliSEO in the Shopify App Store'. Below this, a paragraph explains that the listing page is where merchants learn about and install the app, and that high-quality content is needed for approval. To the right is an illustration of a laptop and a gear. Below the text, it shows 'English listing' in 'Draft' status, with 'Primary' listed below it. There are 'Preview listing' and 'Edit' buttons. A red warning icon and text state 'Resolve issues to submit app'. A light blue information box at the bottom explains that the primary listing is English by default and can be changed to a translated listing. A footer link says 'Learn more about listing on the Shopify App Store'.

The screenshot shows the Shopify App Store homepage. At the top left is the 'shopify app store' logo. On the right are search and menu icons. The main banner features the text 'Go bigger with apps' over a purple and black geometric background. Below the banner are 'Log in' and 'Sign up for Shopify' buttons. A section titled 'Popular with merchants across Shopify' lists two apps: 'Shopify Email' with a 4.5 star rating (1,462 reviews) and 'Free to install' status, and 'Point of Sale' with a 4.0 star rating (502 reviews) and 'Free plan available' status.

The “before” experience

Dashboard UI

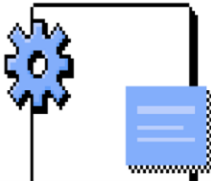

Static with no guidance

Threshr is waiting for review

Apps are currently being reviewed within two weeks of submission.

When the review is complete, any required changes will be sent to ben@threshr.co. Listings are read-only. Withdraw your app to make changes.

[Withdraw app](#)

English listing Submitted [Preview listing](#) [Open](#)

Primary

i Your primary listing is English by default. If you create a [translated listing](#), you can make it your primary listing.

Automated review update email

Not helpful, nor clear. Tonally harsh.

Your app was rejected

One of more issues didn't pass our basic functionality checks during submission.

App Name	Test App 1
Current app status	Draft
App visibility	Unlisted
Review reference	65426

Business problems

- Getting apps approved to be published on the App Store was a strong area of developer dissatisfaction in 2022 and 2023
 - From partner satisfaction survey: “I want more information in advance about how to set my app up for success in reviews.”
- The review process is really long for most developers
 - Time to publish from initial submission: 21 days
 - Most submissions fail to meet requirements a number of times before getting it right

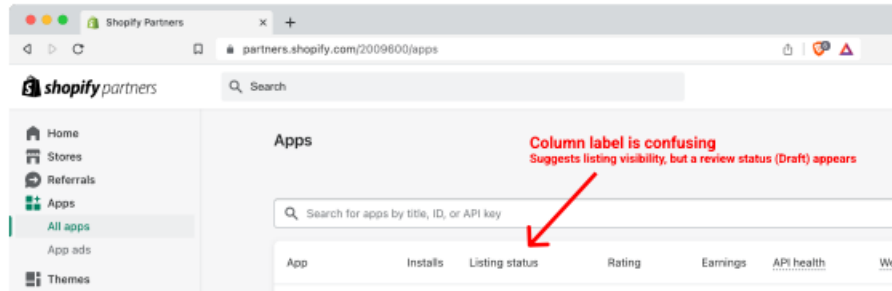

Discovery: User flow content audit

Apps index

JTBD
As an app creator, I want to get to the app I want to work on, and understand critical information about the state it's in.
Tara Hascourts

Given the job to be done, "draft" as a status label doesn't help the developer understand anything about the state of their app.

"Draft" is a more appropriate descriptor of a listing, but not of an app. It also doesn't speak to the review process.

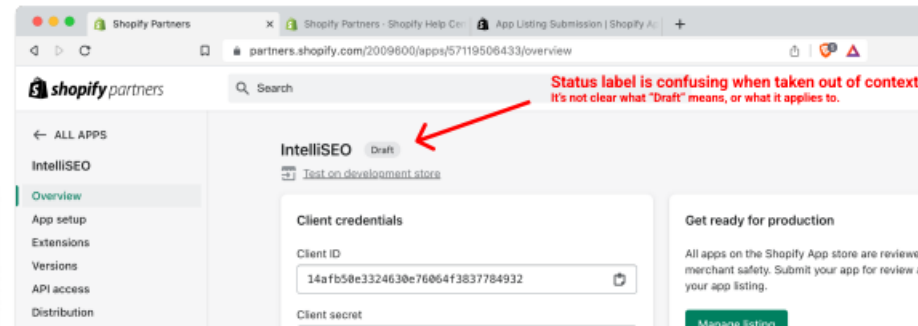

Overview

JTBD
As an app creator, I want to understand what jobs need my attention, when they need attending to, with just enough information to dive deeper, so I can consistently and efficiently provide value to Merchants.
Tara Hascourts

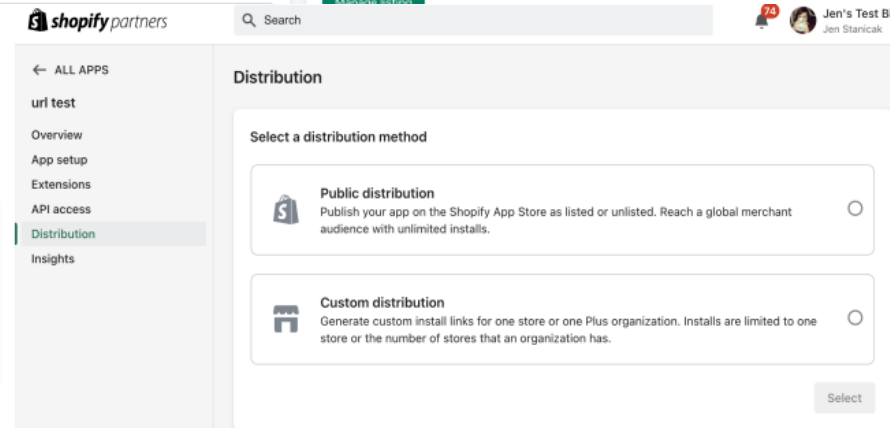

Given the job to be done, it makes sense to include the app status on this page. However, a label with no other explanation isn't effectively communicating "what jobs need the developer's attention."

Because there's more real estate for content on this page, there seems to be more opportunity to leverage the card about "app listing" for information about the app's status.

Distribution - Pre-selection

JTBD
As an app creator, I want to understand and adopt the right distribution model for my app so that I can make money in the way I need to.
Tara Hascourts

Dis

Research: Content insight from partner interviews

“Email is unstructured and easy to lose information. I want a dashboard/checklist experience to see what needs to happen, and be able to get more details or open a thread about each.”

“I think we really had nowhere else to turn and get more information. Luckily our business didn't depend solely on Shopify. We could focus elsewhere and just keep this going in the background. Other businesses might not have that luxury.”

“If seeing all issues upfront is not possible, knowing all the stages of checks and what each includes and being given expectations will be very helpful. So we can start preparing and expedite the process. Timing is the most important.”

Content problems

- **Terminology:** Review emails use different words for single concepts than what are in the partner dashboard content
- **Transparency:** Statuses are vague and sometimes overlap multiple use cases
- **Context:** There's no guidance in the UI around Shopify's App Store requirements
- **Communication:** No humanized element in emails
 - No clear structure making them hard to understand
 - Tonally harsh which can be discouraging when a developer needs to fix something to pass review

Let's make this experience clear

Solution: New content standards for developer audiences

Voice and tone

- *Super clear.* Use [plain language](#).
- *Polite but brief.* Get right to the point.
- *Humanized and conversational.*

Guidelines

- Lead with verbs, as the “to-do.” This makes it almost impossible to miss when and what needs to be done
 - For example: “Fix the problems to get relisted” not “to get relisted, fix the problems.”
- Make the consequences crystal clear.
 - For example: When we say “delisted,” make it clear that means the app is no longer on the Shopify App Store.
- Use the same simple formatting for all emails. The consistency helps reinforce that they all come from us.
- Be specific about dates and timelines for Shopify to review things, and for developers to submit fixes to requirements not met.
- Where it makes sense, reinforce the merchant benefit, AKA the whole reason we have app requirements in the first place.
 - For example: “You need approval to access customer data. This helps protect the privacy and safety of Shopify merchants and their customers.”

Solution: Clean up terminology

Term	Definition	Terms not to use	category	Dos / dont's
app listing	A page on the App Store that provides merchants and other visitors with crucial information about an app. The listing is the object that results from a successful review. Once published, developers manage their listing content on the app submission form in the Dashboard. Listings should be high-quality and policy-compliant to establish merchant trust.	app details page, ADP	App Store visibility	Do reference this concept more generally, when possible. ("Get your app on the Shopify App Store" or "Get your listing on the Shopify App Store" vs. "Get your app listing page on the Shopify App Store.")
App Review Specialist	The title of the human Shopify reviewers who review App Store submissions.		General review terms	
App Store status	A blanket term to generally reference the different types of statuses related to an app's standing with the App Store.	app status	General status term	
automated checks	A check of security-related App Store requirements. They are done on the back-end by the system, not by human Review Specialists. Developers initiate these checks on the App Store review page before submitting for review. They may also be done on a pre-scheduled cadence after submission.	Cambridge check, preflight check, precheck	General review terms	
core review requirements	Requirements that are checked first by App Review Specialists during review. They're critical to the continuation of the review. If not met, the review is paused. Developers will submit fixes for them on the App Store review page in the Dashboard. This submission of fixes may be assigned to a different Specialist for re-review.	blocking requirements	Requirement type	
	An app that's shared with merchants through means other than the App Store. Usually via a direct link to download the app. Custom apps are never published to the App Store. Also called custom			

Solution: Content design a dynamic, action-oriented product UI

Draft  Complete preliminary steps to prepare your submission Submit for review

Preliminary steps

- Fix requirement issues with your configuration
 - URLs: Provide URLs that don't include the words "Shopify" or "example" in the domain
 - Compliance webhooks: Provide URLs for all compliance webhooks
 - App setting: Add an app icon so merchants can identify your app
 - App setting: Use an API contact email that doesn't include the word "Shopify"Fix configuration
- Add an emergency contact for your account
 - Provide an email and phone number for critical technical matters.Fix in settings
- Choose a primary listing language
 - We'll automatically translate English listings to the most frequently selected languages on the App Store. You can add more languages after your primary is published.Choose
- Request access to protected customer data
 - If your app uses customer data, you'll need approval to access it. This helps to protect our merchants and their customers.
 - My app won't use customer dataRequest
- Run an automated check for common errors
 - The check verifies these requirements:
 - Configure [mandatory compliance webhooks](#)
 - Implement an [HMAC signature](#) to verify webhooks
 - Use a [valid TLS certificate](#)Run You can't run until you choose your primary listing language

Paused

Fix requirement issues—check your email for details

Submit fixes

Preliminary steps

- ✓ Fixed requirement issues with configuration ×
- ✓ Added an emergency contact for your account ×
- ✓ Created an English listing Edit
- ✓ Completed request to access protected customer data Review
- ✓ Passed automated check for common errors ×

Solution: Content framework for statuses

State (status)

Why (sub-status)

The screenshot displays four horizontal status cards stacked vertically. Each card has a status label on the left, a central message with an icon, and an action button on the right.

- Submitted:** Status label 'Submitted' (grey), icon of a padlock, message 'We're reviewing your submission—check your email for updates', and button 'Withdraw' (white).
- Paused:** Status label 'Paused' (orange), icon of a person with a red 'X', message 'Fix requirement issues—check your email for details', and button 'Submit fixes' (green).
- Reviewed:** Status label 'Reviewed' (orange), icon of a person with a red 'X', message 'Fix requirement issues—check your email for details', and no button.
- Published:** Status label 'Published' (teal), icon of a person with a checkmark, message 'Keep your listing up to date', and no button.

Solution: UX writing the emails

Automated email: Submission received

*Partner will see state content in dashboard first

Automated email: Non-blocking requirements not met

*Partner will only see content in email first

In review: limited visibility selected

Content note

Dynamic content high risk

- When app doesn't need P25 access, skip to the state email send. There's no need access to protected customer data.

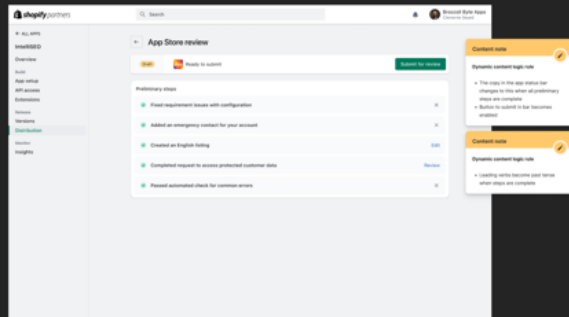

Content note

Dynamic content high risk

- When user selects "Limited visibility" before in previous state, App Store visibility and content changes to reflect the updated setting.

In review: fully visible

Content note

Dynamic content high risk

- The app in the app status bar changes to the state of preliminary steps in the dashboard.
- When app doesn't need P25 access, skip to the state email send.

Content note

Dynamic content high risk

- Linking with history paid terms when state was complete.

Content note

Dynamic content high risk

- The app in the app status bar changes to the state the app is listed as. The app status is set to review when.

Content note

Dynamic content high risk

- When submission is rejected in "Review" state, the listing becomes inactive and the listing will be removed from the App Store.

Content note

Dynamic content high risk

- When submission is rejected in "Review" state, the listing becomes inactive and the listing will be removed from the App Store.

Content note

Dynamic content high risk

- No additional for visibility prior to being submitted, see "P25" of the app status bar. Quality requirements for full review are required.

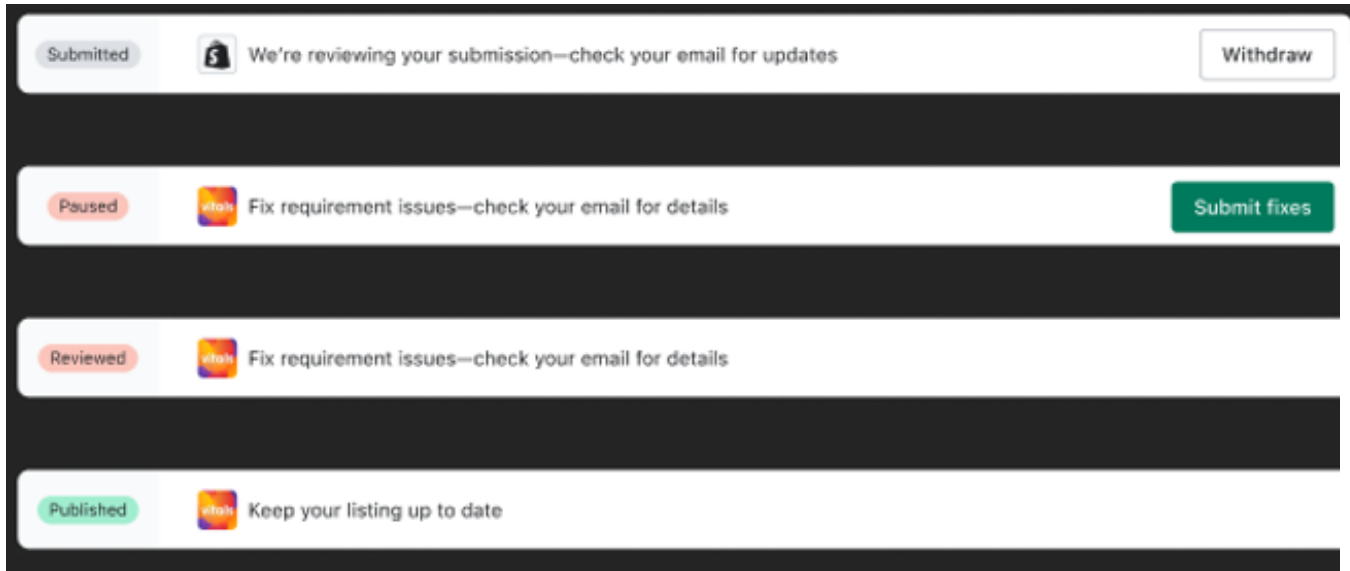

Content note

- Submission is in the submission stage of review flow.

“We can’t build that by Editions”

Content design: The real MVP

Fix core review requirement issues

Your submission isn't meeting some core requirements. Follow the next steps in this email to address what's needed. Your review is paused until you submit these fixes.

Please note: You'll be able to start a conversation with an App Review Specialist **only after we've verified these core review requirements are met.**

App name **Hatity-9**

Status **Paused**

[Visibility setting](#) **Fully visible**

Reference number **164**

Results

Quantitative

In an initial MVP release of only content updates (emails and UI statuses), we decreased the average length of time taking developers to resubmit their apps for re-review after a rejection from 2.2 to 1.5 days.

We believed this to be connected to our strategy of eliminating tonally harsh words and language from the “rejected” status content, and replacing them with more encouraging, action-oriented terminology. (Rejected → Paused)

Qualitative

Generated empirically positive user sentiment and feedback in public-facing Shopify developer communities. Source: [@ShopifyDevs on X](#)
