Getting Help

Powered by Ascend's Dataflow Control Plane, the platform combines declarative configurations and automation to manage cloud infrastructure, optimize pipelines, and eliminate maintenance across the entire data lifecycle.

Get Started

Before diving in, you'll need to set up your Ascend Cloud Account. From there, you can opt to create a pre-configured pipeline, or start with a blank canvas.

Quickstart Guides

The [Quickstart Guides](#) are step-by-step tutorials designed to help you explore the capabilities of Ascend using publicly available data.

Getting Help

We welcome your feedback as we develop new features. Visit support.ascend.io to get in touch with a support agent.

About Ascend.io¹

We make data pipelines better using less code. See how we do it by setting up your cloud account to watch our tutorials.

What does Ascend do?

We made the world’s first Autonomous Dataflow Service to help you build, scale, and operate optimized pipelines without interruption, without a lot of code, and without a lot of breakages.

Our platform uses declarative configurations and automation to manage cloud infrastructure, optimize pipelines, and eliminate the need for maintenance. All of this is powered by Ascend’s Dataflow Control Plane.

How to Begin with Ascend

Start by setting up your Ascend Cloud Account. Then you can try creating a pre-configured pipeline, or you can just start with a blank canvas.

Quickstart Guides

Our [Quickstart Guides](#) are step-by-step guides that help you understand everything that Ascend can do. You can even try it out using some publicly available data.

Initiating with Ascend.io¹

As a Data Pipeline Automation Platform, Ascend expedites optimized pipelines with reduced quantities of computer code. Implement a cloud account to utilize tutorials to begin.

What is Ascend?

Ascend is the inaugural Autonomous Dataflow Service of the world, making it possible to build, scale, and operate perpetually optimized pipelines with reduced code and limited breakages.

The Ascend Data Automation Platform, actuated by the Dataflow Control Plane, integrates declarative configurations and automation to manage cloud infrastructure, optimize pipelines, and eliminate maintenance throughout the entire data lifecycle.

Initiate Ascend Cloud Account

To begin with Ascend, create an Ascend Cloud Account, then generate a pre-configured pipeline or begin with a blank canvas.

Quickstart Guides

The Quickstart Guides are detailed tutorials created to assist in learning to construct data pipelines and create a Data Mesh product using publicly available New York City weather and taxi cab data as examples.

Acquiring Assistance

As new features are evolving, feedback is appreciated. Visit the internet site support.ascend.io to communicate with a support agent.

Take off with Ascend.io!

Ascend makes life easier! We elevate your pipelines with way less code. Launch your cloud account to check out tutorials in our stratosphere.

What in the world (or out-of-this-world) is Ascend?

Who wants to write less code? Ascend was the first to lift off an Autonomous Dataflow Service that lets you build, scale, and operate your pipelines with less coding and fewer glitches.

Launched by the Dataflow Control Plane, our out-of-this-world platform manages cloud infrastructure and scales pipelines with declarative configurations and automation. We'll even take maintenance off your hands for the entire data lifecycle!

How to Blast Off with Ascend

Pre-launch checklist includes setting up your Ascend Cloud Account. Then begin your mission with us by creating a pre-configured pipeline or starting with a blank canvas.

Quickstart Guides

Our [Quickstart Guides](#) take you through and learn our mission procedures at Ascend using publicly available data.

Getting Help with Your Mission
