Creating a Snowflake Orchestration

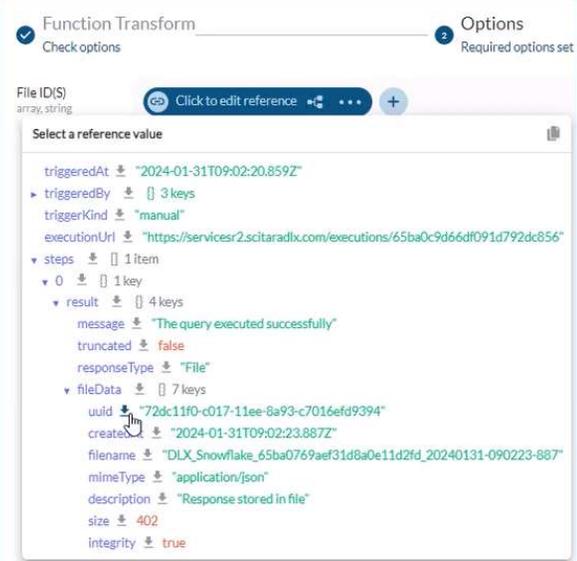

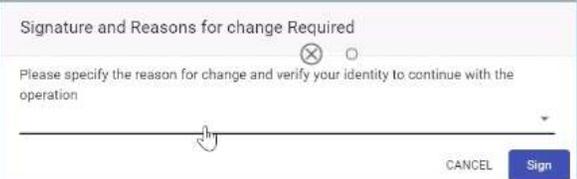

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
1.	Creating an Orchestration with the Snowflake Connector	 <p>Creating a Snowflake Orchestration</p>	00:00:09-00:00:23	This video will demonstrate how to create a Snowflake Orchestration using the Execute Query with Attachment action. This Orchestration will execute an SQL command then return the results as an attachment.	
2.	Access Requirements	 <p>Access Requirements</p> <p>Ensure that:</p> <ul style="list-style-type: none"> • A Snowflake Connection has been created • The Snowflake Connection is online 	00:00:26-00:00:32	Ensure that a Snowflake Connection has been created and is online before creating this Orchestration.	
3.	Creating an Orchestration with the Snowflake Connector: A Tutorial	 <p>Creating an Orchestration with the Snowflake Connector: A Tutorial</p>	00:00:34-00:00:48	Now we will demonstrate the complete process of creating an Orchestration using the Snowflake Connection that we created and configured in the previous lesson. Follow the instructions and we will have a working Orchestration.

4.			00:00:51-00:00:54	From the DLX Orchestration page, click Add New .	
5.			00:00:57-00:01:01	Change the trigger type to "User triggered" and enter the name of the Orchestration.	
6.			00:01:07-00:01:11	Click on the slider in the top-right corner to Enable the Orchestration.	
7.			00:01:14-00:01:18	Click on the plus sign below the trigger, then add a Connection Action.	

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
8.			00:01:22-00:01:28	Select the Snowflake Connector then select the Connection that we created in the previous exercise.	
9.			00:01:30-00:01:33	Select the Execute Query with Attachment action.	
10.			00:01:35-00:01:37	In the Options tab, enter the Query in the String.	
11.			00:01:39-00:01:46	Optionally, enter a value for "Data Bindings" and "Fetch as String". In this example, we are leaving these fields blank.	
12.			00:01:48-00:01:58	Click Save , then enter the reason for change using DLX credentials and click Sign . (eSign prompt will only appear for GxP DLX implementations).	

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
13.		 <p>The screenshot shows the Snowflake Academy interface. On the left, there is a workflow diagram with a green box labeled 'User triggered' and a white box labeled 'Step 0' containing 'Snowflake'. On the right, there is a panel titled 'User triggered' with the text 'Triggers on url or user trigger' and a 'Trigger orchestration' button.</p>	00:02:01-00:02:03	Under User Triggered, click Trigger Orchestration .	
14.		 <p>The screenshot shows the execution log for 'Snowflake_Academy'. It indicates that the 'Orchestration execution completed' and 'User Triggered' step was successful. The 'Connection Action' step output is shown as follows:</p> <pre> Step output message: "The query executed successfully" structured: false responseType: "File" * * * uid: "7261195-0517-1168-84F5-070164699984" creation: "2024-03-12T09:02:23.883Z" name: "DUX_Snowflake_05a279fa1168a6116281_20240311-090223.883" mime Type: "application/json" description: "Response returned in file" file: 402 contentType: "text" </pre>	00:02:07-00:02:11	Expand the Connection Action in the execution screen to view the data.	

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
15.		 <p>The screenshot shows a workflow in Snowflake Academy. At the top is a box labeled 'Snowflake_Academy'. Below it is a 'User triggered' event. This is followed by 'Step 0' which is 'Snowflake'. The current step is 'Step 1', which is 'Function Transform'. A plus sign is visible at the bottom of the flow, indicating where to add a new step.</p>	00:02:13-00:02:21	Close the execution screen and click on the plus sign below the Connection Action step and add a Function Transform step to the Orchestration.	
16.		 <p>The screenshot shows the 'Function Transform' configuration screen. It has a title 'Function Transform' and a sub-section 'Check options' with two green checkmarks. Below this is a code editor with the following JavaScript code:</p> <pre> 1 const data = attachment.content; 2 3 return JSON.parse(data); </pre>	00:02:23-00:02:26	In the Transform Code section, paste the JavaScript code as shown.	

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
17.		 <p>Function Transform Check options</p> <p>Options Required options set</p> <p>File ID(S) array, string</p> <p>Click to edit reference</p>	00:02:28-00:02:33	In the Options tab, click on the File ID expression and change the data type to a Reference.	
18.		 <p>Function Transform Check options</p> <p>Options Required options set</p> <p>File ID(S) array, string</p> <p>Click to edit reference</p> <p>Select a reference value</p> <pre> triggeredAt "2024-01-31T09:02:20.859Z" triggeredBy {} 3 keys triggerKind "manual" executionUrl "https://servicesr2.scitaradlx.com/executions/65ba0c9d66df091d792dc856" steps {} 1 item 0 {} 1 key result {} 4 keys message "The query executed successfully" truncated false responseType "File" fileData {} 7 keys uuid "72dc11f0-c017-11ee-8a93-c7016efd9394" createdAt "2024-01-31T09:02:23.887Z" filename "DLX_Snowflake_65ba0769aef31d8a0e11d2fd_20240131-090223-887" mimeType "application/json" description "Response stored in file" size 402 integrity true </pre>	00:02:36-00:02:42	Click on the Reference and drill down under step to file data, then click on the arrow icon next to uuid.	
19.		 <p>Signature and Reasons for change Required</p> <p>Please specify the reason for change and verify your identity to continue with the operation</p> <p>CANCEL Sign</p>	00:02:45-00:02:55	Click Save , then enter the reason for change using DLX credentials and click Sign . (eSign prompt will only appear for GxP DLX implementations).	

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
20.			00:02:58-00:03:01	Under User Triggered, click Trigger Orchestration .	
21.		 <pre data-bbox="478 808 1003 1068"> Step output • output 5 keys • message "Query executed successfully" • truncated false • rows 10 items • 0 1 key • CUSTOMER_NAME "Thomas Shelby" • 1 1 key • CUSTOMER_NAME "Mike Salomon" • 2 1 key • CUSTOMER_NAME "Michael Gray" • 3 1 key • CUSTOMER_NAME "Polly Gray" • 4 1 key • CUSTOMER_NAME "Shon Shelby" • 5 1 key • CUSTOMER_NAME "Arthur Shelby" • 6 1 key • CUSTOMER_NAME "Thomas Shelby" • 7 1 key • CUSTOMER_NAME "Mike Salomon" • 8 1 key • CUSTOMER_NAME "Michael Gray" • 9 1 key • CUSTOMER_NAME "Gray" • attachments 0 items • executionInfo 4 keys </pre>	00:03:06-00:03:11	Expand the Function Transform step to view the payload showing the data retrieved from Snowflake.	

Screen	Title	On Screen	Video Time Stamp	Voice Over	SME Feedback
22.			00:03:25- 00:03:30	In the Snowflake system, verify that the data shown in the Orchestration execution is correct.	
23.			00:03:34- 00:03:41	We have successfully created and executed a Snowflake Orchestration using the Execute Query with Attachment action.	
24.			00:03:44- 00:03:45	Thanks for watching.
