Details of Networking certification you cannot afford to miss

*W*e generally do not think of something that is not before our eyes, just like computer network technology. We are only worried when there is some malfunctioning of Computer Network. However, this industry is continuously conducting research to make networks reach every section of the world.

The telecommunications industry has been playing hard to develop the next generation 5G cellular communication network.

For all those who are preparing their mind to pursue the **networking courses training** must have some idea about what networking is. In technology, 'networking' can be defined as a connection to a system of computers to share information. The Internet is a similar type of service, and new ideas and better systems are being developed every day.

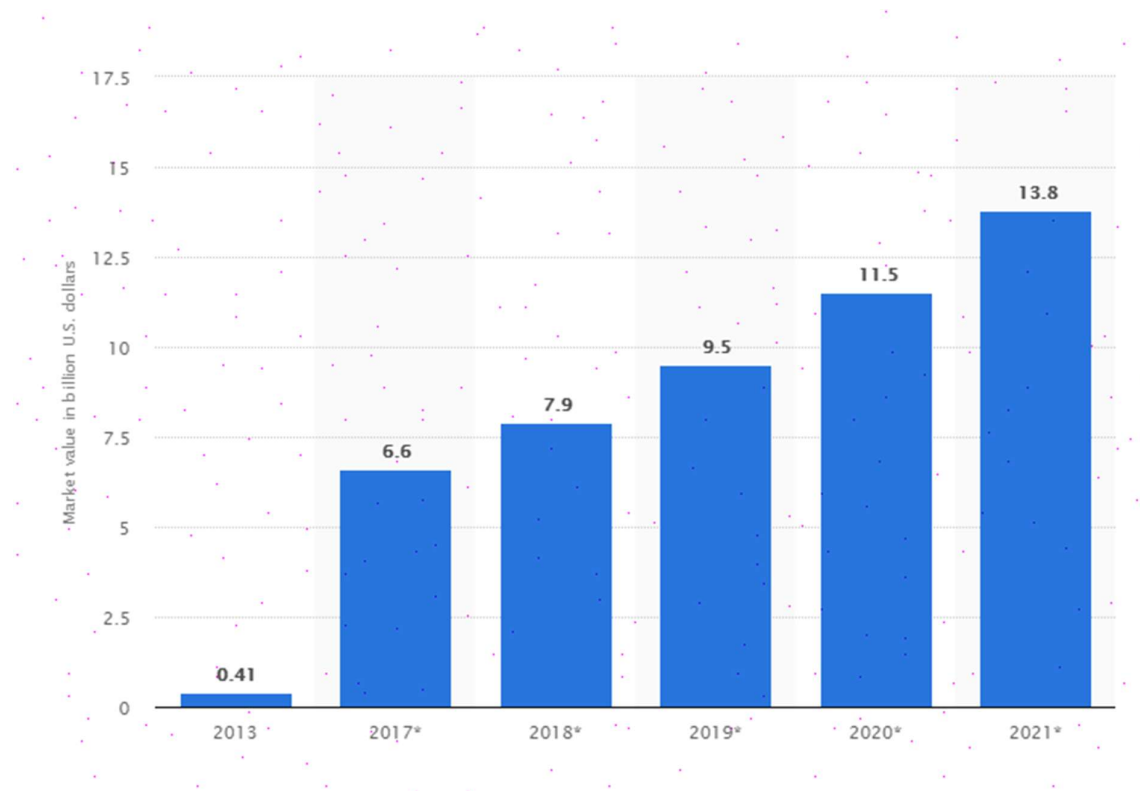

Both students, as well as professionals, can take up this certified course to have comprehensive knowledge of Computer Networking. Networking is a subject that has been constantly under development over the past several years. Some key developments can be:

1. Cloud computing and cloud storage are under the influence of mounting popularity. We now prefer to save all out data, files on the cloud rather, downloading, and saving them physically into hard disks and CDs.
2. Previously we all used 2G. Nevertheless, with time, the networks have been upgraded to 3G and now 4G is the trending one.
3. Connectivity of people over Wi-Fi and hotspots at home and office networks round the clock is also marked as a development in the networking industry.
4. Due to all of the above, there has been a raised competition between broadband providers and services are being provided through the optical fiber.

According to a survey done by https://www.statista.com/statistics/468636/global-sdn-market-size/

It has been observed that

"The statistic shows the size of the software-defined networking (SDN) market worldwide from 2013 to 2021. In 2017, the global SDN market was expected to reach 6.6 billion U.S. dollars in size."

The future of networking is mounting and a certified training course on networking unlocks the door to your bright future career. At ****, the training syllabus is modeled such that the candidates are industry-savvy.

A networking course consists of next generation certifications like:

- CCNA(200-120)
- CCNP SECURITY
- CCNP(R & S)
- ETHICAL HACKING
- Cloud Computing

Choose one of the best training school for assured placements and valuable certification.
