

# JordiLight

2021 |

JordiLight is a versatile, innovative outdoor flashlight designed for adventurers. Its main features include a foldable, wearable design, making it convenient for various activities.

The product was design by Twelve Degrees Design Studio and the first looks-like prototype was made at TechWorks where I led the fabrication process.

The prototyping was done by using various technologies of 3D printing, from SLA to FDM. TO fabricate the flexible part, I had to design a mold to be injected with silicon rubber, insuring preserving the details and appearance of the desired product.

The outcome was two rapid prototypes that helped the client assess the look and feel of the product and adjust the design accordingly.
