About This Webinar

Europe's enterprises are facing increased uncertainty due to inflation, political tensions and disruptions in the supply chain.

For IT and security leaders, there's an added pressure to invest in tech that gives competitive advantage (which sadly increases risk).

Join us as we take a strategic approach to how your security fabric should address these challenges going forward. We'll be joined by Senior Security Leader Omer Yoachimik and explore 3 key pillars to help inform your posture: incoming AI and human-driven threats, instilling cross-department collaboration and leveraging automation to stay efficient with your current resources.

Agenda

- Assessing the current threat landscape: should AI be a concern, the impact of geopolitics, new attack vectors
- Collaborative Security: strategies to instill the culture from board to intern
- Doing more with less: how to integrate automation, efficiency and productivity in your security fabric

Omer Yoachimik
Senior Security Manager, Cloudflare
