

Clean Starts Here: 5 Key Considerations for Your Wheel Wash System

At Wheelwash, we rent, sell, and service our systems to keep your trucks – and the world – clean. Choosing the right system for your work site is paramount, and there are several key questions to consider:

1. **What type of material is to be removed from the vehicles?**
2. **What type of base will the wash system be placed on?**
3. **What type of vehicles will the wash system be servicing?**
4. **Are there any space restrictions?**
5. **Is there power and water available at the site?**

We understand that each project is unique, and that's why we specialize in solutions tailored to the exact size and specifications of your site.
