JAMA Network has entered a multi-year content partnership with Abridge, an AI platform designed to support clinical conversations and documentation across care settings.

Through this collaboration, peer-reviewed research from *JAMA, JAMA Network Open,* and JAMA Network's 11 specialty journals will be integrated into Abridge's clinical decision support capabilities. This will enable clinicians to access trusted, evidence-based insights before, during, and after patient encounters without disrupting their workflow.

"JAMA Network's mission is to promote the science and art of medicine and the betterment of public health, which includes helping physicians remain informed in multiple areas of medicine," said **Brian Shields**, Group Vice President, Publisher, JAMA Network. "This content partnership with Abridge reflects our commitment to using technology to improve access to journal content and making trusted, validated evidence available at the point of care."

The partnership also includes NEJM Group, reinforcing the role of leading peer-reviewed journals in shaping how AI is applied in clinical practice.

Integration of JAMA Network content into Abridge is expected to become available in the coming months.
