

PARADISE FOUND!

SUPER MARIO SUNSHINE

Join Mario on his vacation in the tropical paradise that is Isle Delfino—enjoy the clear water, the sandy beaches and the thick, slippery sludge!?

Have a Blast

Mario's vacation has been put on hold because of the sticky sludge that is ruining the health and beauty of Isle Delfino. A mysterious figure who looks a little like Mario might be to blame. Mario uses our new device—the FLUDD—to clean up the island and deal with the dirty hooligans, and the hooligans too often turn into the enormous sticky slime blobs in the new world.

A blast of water cleans the beach off Mario.

Mario cleans up the beach with the water from the ground.

Mario cleans up the beach with the water from the ground.

Mario cleans up the beach with the water from the ground.

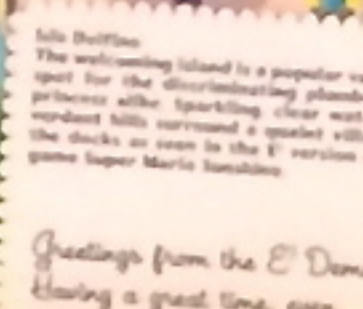

In the E version of the game, Mario cleans the beach.

Mario cleans up the beach with the water from the ground.

HAVING A GREAT SHINE!

Isle Delfino
The welcoming island is a popular vacation spot for the discriminating plumber and princess alike. Sparkling clear water and verdant hills surround a quiet village by the docks as seen in the E version of the game Super Mario Sunshine.

Greetings from the E Domet
Having a great time, even though my relaxing vacation fell through! All screen shots are from the E version of the game and therefore are subject to change!

Meet, Greet and Defeat

Mario now faces a new foe in Super Mario Sunshine. Some are quite friendly, and some are as unfriendly as you can get. A few familiar faces also appear in the game as enemies, obstacles and friends. You never know who is waiting to greet you!

WISH YOU WERE HERE?

The Place's the Thing

Mario's vacation destination is beautiful even when it's polluted by swamp-spraying goop gunk. The E version of the game revealed a few types of environments that may be found in the final version of Super Mario Sunshine. Luckily, there's plenty of water around to keep the FLUDD filled.

Whether it's cleaning the island with gunk also seems to be having a sign on it.

Mario's adventures have always been a relaxing job.

The water conditions are similar to those in Super Mario World, and Mario can clean them.

The upcoming video game will be released with its environment as new levels.

WATER YOU WAITING FOR?
