Longitudinal, Predictive Analytics is the Key to Unlocking Success in Physical Therapy Education

Written By: The TrueLearn Team | Share:

Evidence-based strategies and actionable insights help maximize first-time NPTE® pass rates

To drive higher first-time pass rates on the NPTE® exam, Physical Therapy program leaders and educators need access to real-time performance data that allows them to identify at-risk students early and provide effective support to close knowledge gaps quickly. Additionally, educators need tools that are aligned to the latest exam format, proven to accelerate learning, support and guide teaching, and can easily integrate into the curriculum.

In our new Educator Guide, we share how other PT programs utilize TrueLearn and five ways our solution generates meaningful data to identify at-risk students early, uncover weaknesses and strengths, track longitudinal trends, and more. Our solution enables precise decision-making in the classroom and across the curriculum, paving the way for student success in PT school and on the NPTE® exam.

Yield the Best Results in PT Education with TrueLearn's Data-Driven Platform
