

# SOP (STATEMENT OF PURPOSE) WRITING

---

Date: 7<sup>th</sup> October, 2024

**Name of the Candidate:** Preeti Kapoor

Time and again, as a proactive nature lover participating in beach and local park clean-ups, I have observed the wide gap of discrepancies between our natural environment and the actual implementation of sustainable conservation practices globally. This concern prodded me to pursue my Master's in Environmental Science, with the passionate objective of contributing to effective global eco-conservation rather than being a mere observer.

Completing my Bachelor's degree in Environmental Studies from XYZ University and scoring a GPA (Grade Point Average) of 3.8 enabled me to understand the scenario with a coherent perspective. Sensing the loopholes that reflected the inadequacies of awareness was just a starting point. Delving deep into pursuing coursework about Ecology and Environmental Policy, I realized that to achieve a flow, the concept of Sustainable Development had to work hand in hand with the ecological system and the environmental laws and policies.

Foraying further into the field, I found an exciting interest in engaging in research projects revolving around renewable energy sources. It was a prevalent thought, we had to ensure that energy depletion is handled wisely for future generations. All these forms and practices of learning fueled my desire to pursue this program, which could serve as a launch pad to actively be a part of rendering global conservational solutions.

I was fortunate to acquire the amazing opportunity to intern at ABC NGO, which focused on eco-conservation. They primarily assist in service-oriented community outreach programs, also conducting environmental campaigns that powerfully communicate the need to do our bit for our planet.

Speaking of the environment, wildlife is an integral component that is now adversely affected by the immense magnitude of pollution. Working as a Research Assistant for Professor LMN

for a unique project that studied the effect of pollution on wildlife, drew me closer to the significance of animal welfare and activism.

My short-term goal is to gain advanced and complete knowledge and skills in Environmental Science and Sustainability through the Master's program to leverage my knowledge to foster impactful conservation methods. In the long run, I aspire to work with international organizations like the UN and WHO to develop sustainable environmental policies for a healthier planet.

I have great and genuine admiration for this program's unwavering commitment to sustainability and its innovative research initiatives that are driven by strong fundamentals and smart thinking. In particular, I believe its renowned faculty and access to cutting-edge facilities will boost my professional growth and career as an environmentalist.

I am happy to share that this esteemed and tailor-made program aligns perfectly with my goals and ambitions. I am also confident that my range of experiential learning and promising capabilities will live up to the vision of this excellent program.

My love for environmental conservation and sustainability has always propelled me forward. Looking beyond, the yearning to encourage people to pursue a career dedicated to environmental protection strengthens my resolve to collectively conserve our planet, our abode of existence, for a happier and safer tomorrow.
