

'MyTrek' Trek Tracker

Want to make your trekking adventure more about the fun of exploration and less about tracking down the route? Feeling lost because your GPS-enabled mobile isn't tracking your position on non-digitized maps? Then MyTrek Trek Tracker from AFTEK® Ltd is just what you are looking for! This rugged and lightweight handheld device will loyally assist you no matter where you want to trek and will keep a track of your journey all along, so in case you feel lost or just need a reference for back-trekking, it will always point you in the right direction. What's more, you can showcase your trekking journey online and connect with like-minded trekkers.

The Small Wonder

MyTrek is small and rugged, perfect for a trekking enthusiast, who would like to have minimal weight and maximum functionality in a compact form. Sporting a brilliant 3.5-inch LCD color display, it allows for crisp and clear viewing, even under direct sunlight. The rubberized edges of the device are ergonomically contoured to enable tighter grip with no slippage. Moreover, the 5-mm thick Neoprene material is heat- and moisture-resistant, and it is ideal for carrying along in all terrain conditions without risking the devices' functionality.

Digital Keeper of your traveling memories

Apart from being an excellent tracking device, MyTrek doubles up as a digital recorder of Poles (Point-of-Interest). You can anytime add annotations and remarks on MyTrek and, taking advantage of its hands-free feature, can even record voice clippings. Witnessed one mesmerizing Sunset from that hilltop? Want your fellow trekkers and/or family members to know about this hitherto unknown spot? Mark and Record away your enthusiasm! At the end of the journey, you can relax and go through this virtual trail of memorable spots and relive those moments. Supporting an adequate in-built memory of 12 MB, expandable up to 48 MB, this device provides plenty of room to record and store your journey, no matter how long you wish it to extend.

Operate with ease

The device can operate in two tracking modes: Automatic and Manual. In Automatic mode, you can set the time interval at which the device will automatically mark the current location in terms of latitude, longitude, and geodesic height co-ordinates. This way, the marked spot can be referred back universally and can be tracked precisely. You will hear a faint beep when the recorder 'marks' such a point. Additionally, except for the first mark (at the beginning of your journey), MyTrek can automatically connect the latest mark with the previous one, displaying an easy-to-understand trail line for instant reference. You can set this feature on or off, as per your convenience. Besides, you can insert verbal/non-verbal comments over these specific Marks or anywhere else that you like, as described above. The Manual mode, on the other hand, allows you to mark the tracking points as and when you wish.

The Software companion

Once you reach your destination, you can save the map of these tracking points as a Binary file with its proprietary format. This can be transferred to your PC/Mobile using the MyTracks software, which conveniently allows you to edit and share these maps with others. You can edit the existing info and add extra information using the 'Workbench' feature of MyTracks. This file can then be transferred back to MyTrek for future reference or can be directly uploaded to the online community portal, MyTrek.com.

Share effortlessly

The MyTrek.com is your handy portal and online community for showcasing your thrilling expeditions to the world. It allows you to interact with like-minded people, sharing your interest and exchanging information. It also lets you create short blogs and post memorable pictures of your trekking escapades.

Additionally, you can avail the option of online purchase of MyTrek device from the site through a secure transaction. However, such purchase is not mandatory for making use of the available maps. You can download all the user-made maps onto your PC/GPS-enabled Mobile phones. All you need to do is download the required software (MyTracks) for a minimal cost. Such versatility of usage allows for a widespread reach of your maps.

Combining style and functionality with unmatched features, MyTrek will keep you on the right track, always!
