City Engineer

We had an awesome time building our city this week! On Monday, campers began by building houses and stores, followed by parks and green spaces, city services, and vehicles on Tuesday. On Wednesday, we added height and dimension to the city with super cool skyscrapers and bridges.

On Thursday, campers built restaurants that served delicious food and drinks, and minifigures were added just in time to play before pickup!

Boats and planes were also built on Friday to get from one side of the city to another.

Thank you for such a creative and fun week at Bricklabs. We hope to see you again soon!

Advanced Builders: Vehicle Design

What an action-packed week!
On Monday, campers began by building firetrucks in different sizes, starting with two minatures and then full size, to familiarise themselves with the process of designing a vehicle through prototyping. Then throughout the rest of the week, campers designed their own custom vehicles.

We learned about the concept of cohesion, in which their minifigure and garage matched the style and purpose of the vehicle - similar to that of a real Lego set.

Ask your camper about their custom vehicle!

- Step 1: Make a plan
- Step 2: Make miniature prototypes
- Step 3: Build your custom vehicle
- Step 4: Build a minifigure, garage and/or scene to match
