Archaeology and Paleontology

We had an amazing week of treasure hunting and dodging booby traps! On Monday, campers dived right into the week's theme by recreating a ruined temple and building pyramids. On Tuesday, we visited the Seven Wonders of the Ancient World and built them in their former glory using our imaginations.

Wednesday was filled with digging for fossils - dinosaurs and all!

Then on Thursday, a museum was built to display the ancient fossils we found. Friday was an explosion of fun as we learned about volcanoes and how their ash can preserve remains. Campers also grabbed their ice picks and chipped away for some lost Lego hidden in ice!

Thank you for such a creative and fun week at Bricklabs. We hope to see you again soon!

Intro SPIKE Robotics and Coding

What an awesome week of robotics! Campers built and coded a breakdancing robot, a super grabber, a safe, a hopper robot, a smart bike, a spirograph, a colour brick sorter, and more.

The codes for each robotics creation were built by themselves, and campers experimented with different sensors (colour and force) and motors (up to 2 per build).

Ask your camper about
their favourite robotic
creation!

We also covered important concepts such as trial and error, prototyping, problem-solving, critical thinking, and perseverance.

If your camper enjoyed this week, we offer Robotics classes this fall!
