

# BusinessGPT Release Notes

## AI Agents Tools Expanding Your Agents Capabilities

Dear \$[UD:FIRST\_NAME||]\$ \$[UD:LAST\_NAME||]\$,

We are excited to announce the latest updates and enhancements to our platform.

### BusinessGPT Version 2.14.2 Main Changes:

#### New Built-in AI Agent Tools Released:

- **Deep Research** – Enables users to ask complex questions and receive in-depth, well-researched answers on a wide range of topics.
- **Analyze Image** – Allows users to upload an image and ask questions about its content.
- **Speech to Text** – Converts audio files into accurate text transcriptions.
- **Create Document** – Generates structured documents (Word, PDF, etc.) based on user input or data.
- **Convert Document** – Transforms files between formats (e.g., Word to PDF) while preserving layout and structure.
- **Perform Calculation** – Executes mathematical and statistical operations using user-provided data.
- **Analyze Excel** – Extracts insights, answers questions, and summarizes content from Excel files.
- **Visualize Data** – Creates visualizations such as charts and graphs from raw data using built-in plotting tools.

#### Customizable Firewall Notifications and Emails:

Account Admins can now customize the default titles and body texts of firewall notifications, as well as the emails sent when prompts or files are blocked or flagged.

#### New Flag Event Popup Setting:

A new setting allows Account Admins to control whether a popup appears when a prompt or file is flagged. This provides more flexibility in managing user notifications during flag events.

#### Global Account Settings Management for Site Admin:

Site admins can now view and edit settings for any account via *Site Management > Site Statistics* by selecting an account and clicking *Settings*.

#### Expanded Company Knowledge Base with New Data Source Integrations:

Account admins can now add multiple data sources under the Company Knowledge Base- e.g, Email, Drive, Copilot, and OneDrive - making their content available for end users to access and use.

#### Account & Site Feedback Page:

Added feedback pages for each account and site showing all user feedback, with filters for feedback type and creator.

# BusinessGPT Release Notes

## Privacy First AI Platform

### Data Privacy and Risk Management for AI

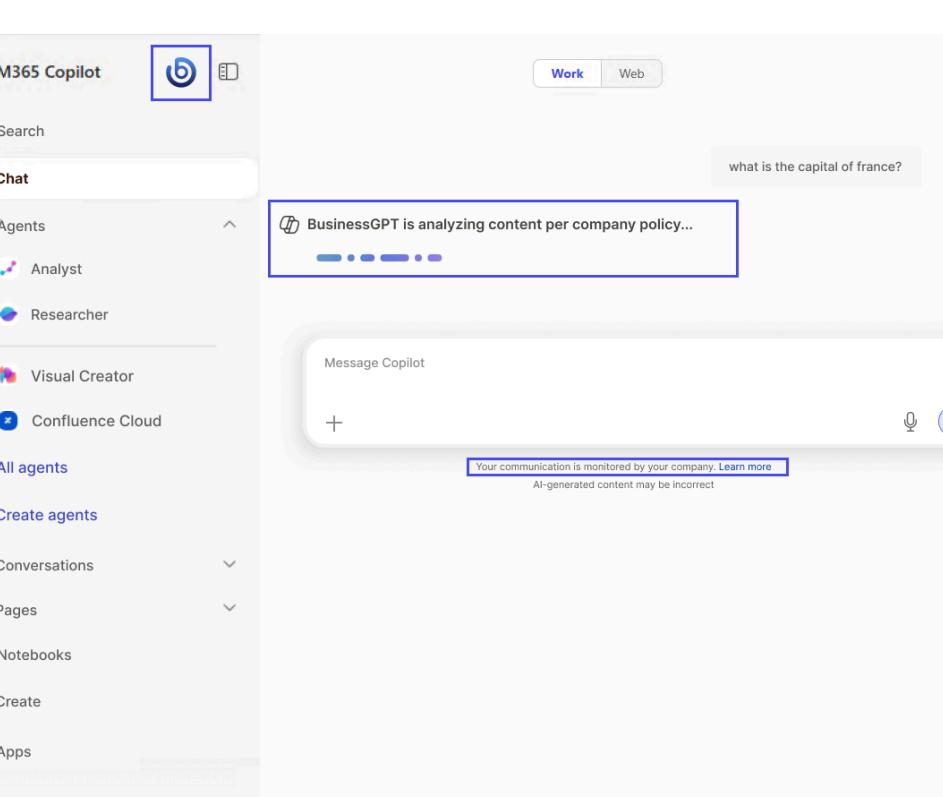

Dear \$[UD:FIRST\_NAME||]\$ \$[UD:LAST\_NAME||]\$,

We're excited to introduce a significant update to the BusinessGPT Firewall, featuring a unique capability unmatched by other network proxy solutions: the seamless integration shows compliance policy guideline feedback directly within the native AI interface.

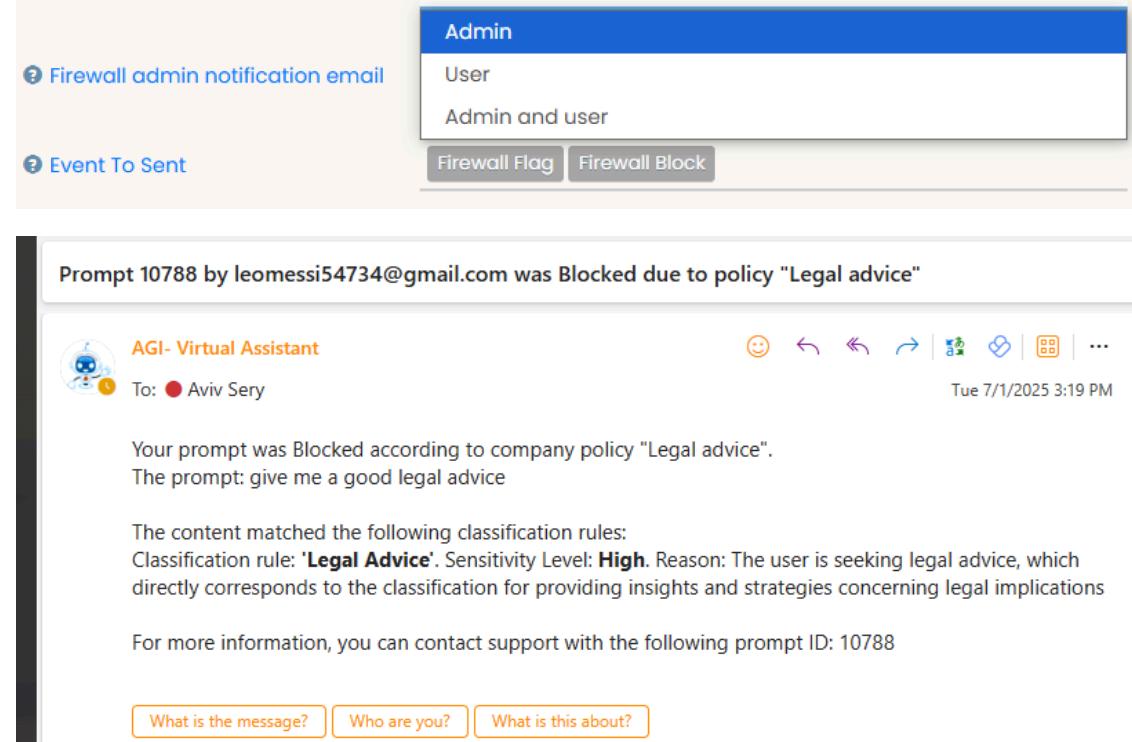

This powerful enhancement enables organizations to effortlessly improve compliance policy awareness training and adoption into the AI service environment, delivering contextual, near real-time feedback for a streamlined and effective user experience.

## Main changes for V2.13.2.1

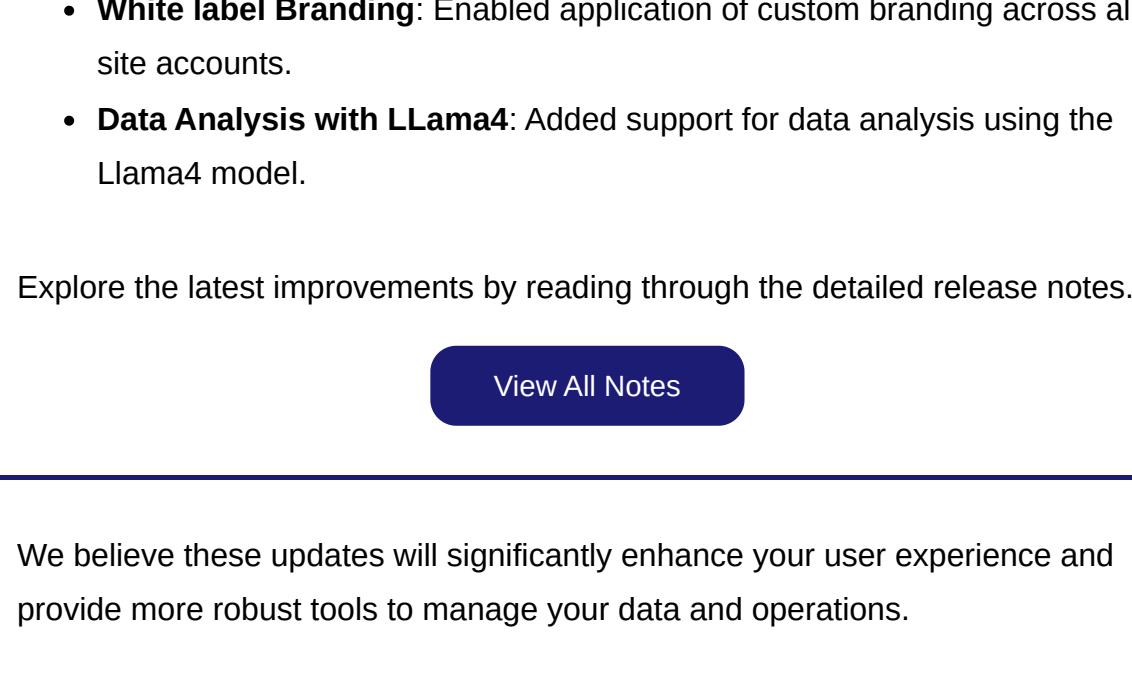

**In-Context Popup Notifications for Firewall Actions:** Added native support for displaying popup notifications within the AI service interface (similar to ChatGPT) when firewall actions are triggered, enhancing user awareness and interaction.

- Prompt and File Analysis Status Messages:** Introduced in-context messages to inform users when their prompts and uploaded files are being analyzed, improving transparency and user experience.

- Email Notifications for Firewall Events:** New option to send firewall event notifications via email to administrators, users, or both, streamlining event monitoring.

- Disclaimer** - Added disclaimer at the footer of the AI service and a BusinessGPT icon to indicate traffic is proxied.
- Customizable Notifications:** Added options to fully customize email and pop-up notification messages for end users, providing greater flexibility and personalization.
- Full Auditing for Google-Authenticated Copilot Users:** Added comprehensive audit logging for Copilot users signed in via Google, ensuring robust tracking and compliance.
- White label Branding:** Enabled application of custom branding across all site accounts.
- Data Analysis with Llama4:** Added support for data analysis using the Llama4 model.

Explore the latest improvements by reading through the detailed release notes.
