We are adding 2 links to the Report link section of the site to allow users to get routed to the change report page.

Change Reports

Tooltip for Refresh Icon at the top of the page: Refresh the currently visible report.

Tooltip on the ActionID hyperlink: Click the ActionID to view the details of an automated change.

Tooltip on the Standard Change Number Hyperlink: Click the Standard Change Number to view the standard change.

From stakeholder:

I added the Environments in for the PPE validation scenario. They need to see if a change was only for PPE, or if it was the Primary/Secondary change.

Current Changes:

Farm locked dialog box (no access allowed to site, come back later after maintenance)

Farm Locked During Maintenance

The farm is currently in maintenance mode. Changes have been disabled until maintenance has been completed.

OK

Add/Edit User Properties (SPOD-10-082 A and B)

Add User Properties

Change ID	SPOD-10-082A
Description	Add to the set of Profile Properties displayed for users in profile store. Note: If the profile property being added is mapped to an Active Directory property, a full profile sync will also be conducted by Microsoft. That sync can only occur in a change window. Important: Existing property values in Active Directory should be imported to SharePoint previous to any new export or the data in mapped properties of Active Directory will be overwritten. You must sign off on this CR in PPE.
PPE Sign Off Required?	Yes

From stakeholder:

This is a user control that will appear above any automated configuration form. The text is pulled from the standard change list.

Delete user properties (SPOD-10-082 C)

From stakeholder:

Clicking Delete should result in two confirmations. Rendered via modal dialogs [`SP.UI.ModalDialog.showModalDialog`]. Clicking No on either dialog cancels the delete:

Are you sure you want to delete the property <<PropertyName>>?
[Yes] [No]

Clicking Yes:

Deleting <<PropertyName>> will also remove all data associated with the property.
Are you sure you want to permanently delete <<PropertyName>> and all associated data?
[Yes][No]

Change details page (all details of automated change)

From stakeholder:

The headings are open for change, but all the other information is pretty much tied to a specific change.

User Properties Editing (Provides user properties add/remove/editing/sorting to customers)

Add User Properties

Change ID	SPOD-10-082A
Description	Add to the set of Profile Properties displayed for users in profile store. Note: If the profile property being added is mapped to an Active Directory property, a full profile sync will also be conducted by Microsoft. That sync can only occur in a change window. Important: Existing property values in Active Directory should be imported to SharePoint previous to any new export or the data in mapped properties of Active Directory will be overwritten. You must sign off on this CR in PPE.

First name	🗔		string (Single Value)	givenName			6 ▾
My Custom Property	🗔	✕	string (Single Value)				7 ▾

Commented [RB(L15): *Rectangle*

Question: Should this be Add Profile Properties instead? The other links are plural, which is why I ask.

Import Term Set will be the Standard Change List text for the entry, with the addition of a link that says "Click here to import a term set." that points to /_layouts/termstoremanager.aspx.

Commented [RB(L16): Do I have this associated with the wrong UI? If so, let me know. I don't think the text needs to change, but I might be wrong about that depending on context. Thanks!

Change disabled by sys admin/account manager

Commented [RB(L17): No suggested change.
