

We're here for you - even when you're at home

The Hospital@Home program combines access to the expertise and compassionate care of our staff with the many resources available throughout the system to care for you.

- » 24/7 access to the Hospital@Home program team
- » On-site exams and care administered by Lee Health nurses
- » Routine and as-needed video visits from a doctor or nurse every day
- » Monitoring for temperature, pulse regularity, and other important indicators of health status
- » Medications, IV infusions, testing, imaging, and therapy brought to your home as needed
- » Dietary service and other resources available based on each patient's individual needs

Once discharged from the program, a full report of your care and test results will be sent to your primary care provider.

Hospital@Home

Bringing high-quality care to where you are most comfortable.

Hospital-level care in your own home

Lee Health's Hospital@Home program allows patients like you to receive the same higher level of care that would usually be received in a hospital setting, right in your own home.

Our team of compassionate care providers are ready to assist you in managing your illness or health condition with easy communication, a wide range of mobile and virtual services, and around-the-clock monitoring to ensure your well-being.

Hospital@Home was established after a 10-year study of hospital alternatives, and results show that program patients are more satisfied than those receiving similar care within a hospital environment. You get the same expert treatment you've come to expect from Lee Health, while staying where you are most comfortable - all at no additional cost to you.

Sample schedule of home visits

Day of admission

Initial in-home visit with simple exam.
IV therapy, and lab testing.
Video visit with physician.

Day 1

In-home visit with a Lee Health nurse.
IV therapy and lab testing.

IV therapy, x-ray imaging, and lab testing.
Video check-in with the program team.

Day 3

In-home visit with a Lee Health nurse.
IV therapy and lab testing.
Video check-in with the program team.

Day 4

Virtual visit by physician.
IV therapy and lab testing.
Video check-in with the program team.

This schedule is a sample and for demonstrative purposes. Your H@H schedule may differ from the example above.

Next steps

Once you decide to participate in Hospital@Home, our team will:

- 1 Meet with you to discuss your care needs and the tools we'll use to ensure your well-being and comfort
- 2 Help transport you home with the supplies and prescriptions specific to your illness or condition
- 3 Arrive to setup the equipment we'll use for communication and monitoring your care

We'll make sure you have what you need for the hospital-level care you expect. Treatment begins immediately, with minimal interruption as you transition from our facility to your new healthcare environment - your home.
