

1.

LinkedIn: At iconectiv, we know that nothing is more essential to organizational operations than simple, seamless and secure network interconnection. More than 5,000 companies worldwide agree. We work closely with private, government and non-governmental organizations who, in turn, rely on us for their most critical communications systems. See why here:

Twitter: Have you ever imagined a world where the ability to access and exchange information is simple, seamless and secure? It's not as far away as you might think. Every day we're helping global service providers accurately route billions of calls to keep people connected:

2.

LinkedIn: There is no doubt that gaining market share while reducing risks and costs is essential for any flourishing business. With TruNumber Gateway, we make it easy to coordinate your back-office systems and automate portability transactions, which leads to faster revenue generation and streamlined processes. Learn more about how to take the pain out of porting:

Twitter: Every year, 30 million numbers are ported in the US, marking many customers' first interactions with a service provider. How do organizations ensure that this experience is fast and painless for their customers? By using iconectiv's TruNumber Gateway:

3.

LinkedIn: Personal authentication is the most important tool to facilitate our digital experiences, which might be why identity fraud is on the rise. Phone numbers have become a way to spam customers—or even worse, receive access to their data. It's time to take identity seriously, starting with protecting the integrity of the phone number:

Twitter: There's no question that bad actors in the communication industry is causing problems for network operators globally. With nearly five billion illegal robocalls a month, customers are losing trust in caller IDs. We need to stop underestimating the power of identity:

4.

LinkedIn: Your organization's infrastructure is at risk if you cannot ensure the flow of consistent and accurate information. That's why TruOps Common Language is bringing order to the chaos by streamlining language surrounding the name of your locations, the view of your network, and the way to automate your operations and optimize processes. Learn more:

Twitter: Looking to bring order to the chaos of communication issues in your organization? It's time to try TruOps Common Language. For service providers with a lot of moving parts, Common Language provides the consistency and intelligibility in your ecosystems:

5.

LinkedIn: "Communication service providers can't manage something efficiently if they have no visibility

into it.”

@Eyad Alqadi and @John Hayes were recently interviewed for VanillaPlus magazine’s “Talking Heads” section. If you’re a CSP looking to sustain revenue growth and profitability while delivering new digital services, this is one conversation you won’t want to miss:

Twitter: This is a difficult time for CSPs as they fight to sustain revenue growth and profitability while overcoming regulations and technology disruptions. Check out this interview where two of inconectiv’s experts talk CSP solutions:

6.

LinkedIn: With more than \$1.82B in losses annually, one-ring "wangiri" robocalls are a growing threat to businesses. Luckily, iconectiv's TruNumberProtect can help you identify calls from high-risk and unallocated number ranges and suspicious premium-rate numbers before they reach customers.

For more on the who, what, where, when, and how of TruNumber Protect, read this whitepaper:

Twitter: Worried about one-ring "wangiri" robocalls attacking your customers? Our TruNumberProtect can help you identify calls from high-risk and unallocated number ranges and suspicious premium-rate numbers, so you don’t have to worry:

7.

LinkedIn: Toll-free number expert, @Mike Gilbert, knows how crucial toll-free calling is to consumer trust. And with the recent news that calls made from toll-free numbers can now be included in the Calling Number Verification Service, toll-free numbers are now more important than ever:

Twitter: 86% of consumers view companies with toll-free numbers are high-quality companies. Learn how you can increase consumer trust in this video from toll-free number expert Mike Gilbert:

8.

LinkedIn: Many people aren’t aware that toll-free numbers are more than just a way to provide superior customer service. In fact, they are a key tool to growing your business and building brand equity that will be recognized anywhere.

Over 32 million North American toll-free numbers are managed by TruReach Toll-Free 8MS. Come see why:

Twitter: With more than 75% of all toll-free numbers managed in North America, TruReach Toll-Free 8MS is the premier toll-free provisioning solution. We help you build your brand equity and expand the geography of your business so you can continue to grow:
