

Close the Gaps in Your Cybersecurity to Protect Your Manufacturing Business

Concept, copy, and strategy by [Toire Fisher](#)

SPEC SAMPLE — Cyber Drive Security Inc. is fictional and was created for portfolio purposes.

Tim is the head of the IT department at a prominent manufacturing company. He does his job well; the CEO is pleased.

But that changed when a seemingly minor security incident exposed a larger vulnerability. The team couldn't tell how serious it was at first and thought it could handle the problem. But soon enough, the incident became a company-wide data breach that compromised the sensitive information of thousands. Operations had to shut down until the problem was fixed. Millions in revenue were lost. The CEO was not pleased.

How could this happen? The company had precautions in place to prevent this, but its system proved insufficient and outdated. One attacker—or one oversight—was all it took.

Now, the pressure was on Tim to clean up the mess.

Tim is fictional, but the situation is real. Manufacturing organizations continue to account for a large share of industrial ransomware victims.

Like Tim, you're the leading IT professional on your team. As the head of cybersecurity, you want to ensure your network is airtight. Otherwise, the smallest mistake could lead to severe consequences.

If there were gaps in your system that you couldn't see, wouldn't you like to know about them?

That's exactly what we help you do here at Cyber Drive Security Inc.

How do we do this? With our proprietary AI-powered tool, we comb through your system to reveal gaps, redundancies, or loopholes you may have missed.

But that's not all...

We offer a free comprehensive review and explain how you can fix any data vulnerabilities with the industry's latest, most effective methods. And to top it off, we'll offer you monitoring software that will alert you to any potential leaks, so you can be there before things get worse.

We're IT professionals. We know what's at stake, we know what to look for, and we know how to help you. Put your mind at ease knowing you have a certified team behind you, watching your back to keep your cybersecurity in top form.

The following testimonials and company names are fictional placeholders for this spec sample:

"Cyber Drive Security Inc. showed me exactly where we could improve our system, stayed with our team throughout the review process, and suggested a plan that made our security stronger than ever."

— Placeholder IT Manager, Manufacturing Company

"Thank goodness for the team at Cyber Drive Security. Their state-of-the-art AI tool is a dream come true and showed us all of our potential threats down to the last detail."

— Placeholder Cybersecurity Analyst, Construction Company

You may already have a security system set up and not think anything needs to change, but consider how many industrial organizations face ransomware each year. Dragos tracked 119 ransomware groups impacting 3,300 industrial organizations in 2025, with manufacturing accounting for more than two-thirds of victims.[1]

It doesn't benefit you to be complacent. Level up your security now, so you won't face the consequences later.

Because we care about your company's well-being, we're offering a free cyber coverage gap assessment for your business. It includes an AI-assisted review of your security systems and operations. Once finished, you'll know exactly which areas are vulnerable, and you'll have the chance to select a plan tailored to your needs.

This is too important to pass up. Your system could be hacked when you least expect it. Schedule a cyber coverage gap assessment today.
