

Patient Information Leaflet: Concor (Bisoprolol Fumarate)

What is Concor?

Concor is a medication containing an active substance called "Bisoprolol fumarate" which belongs to the beta-blocker family that makes your heart more relaxed and beats slower.

What is it used for?

- It is used to lower high blood pressure levels (Hypertension)
- It also could be used along with other medications in the treatment of some heart problems as indicated by your healthcare provider.

How do I take it?

- It is available in two concentrations; 5mg and 10mg.
- In case of hypertension, it is recommended to start with 5 mg once daily and increase to 10 mg once daily when needed.
- Don't take more than 20mg per day, unless your physician told you.

 If you have kidney or liver problems, do not take more than 10 mg per day.

 Not recommended for children.

Warnings & Precautions

- To be used with caution when the patient has heart disease.
- It should be used as prescribed.
- It shouldn't be used if you are sensitive to Bisoprolol.

Possible Side Effects

- Low heartbeat
- Headache
- Dizziness
- Problems in the digestive system; nausea, vomiting, and constipation
- Coldness or numbness in the extremities,

 If any side effects upset you, tell the doctor.
