

## Why I would love to take this role

In the first few months of the Trump administration, WIRED became my go-to news source. The publication's reporting on DOGE, the dismantling of US AID, and the group of tech CEOs that were now seemingly more important than any elected representative shaped the way I understand and report on our current moment. At a time when it felt like vibes-based headlines were everywhere, WIRED stayed focus on going from the specific to the general. I believe that, nowadays, reporting on tech is reporting on power, and no one does that better than WIRED. I want to be part of a team that, amidst all the noise, is laser focused on well-sourced and contextualized reporting.

Personally, I have spent the last year and a half reporting on trends affecting foreign direct investment. My time on this beat has perfectly coincided with the explosion of AI mega deals, which has led me down the rabbit hole of beliefs, technology, and money that drives this industry. The more I report on technology, the more invested and curious I become. However, my experience reporting across different industries and topics—such as energy, labour, and geopolitics—makes me perfectly placed to be a staff writer, working across different beats on breaking news and enterprise stories.

## Why I am a great match for what you are looking for

At Investment Monitor I am a team of one. It has taught me to work efficiently and accurately across tasks and topics. At the same time as I'm working on a feature about AI upskilling, I might be interviewing the CEO of a special economic zone, or commissioning an op-ed on the rare earth supply chain. I have worked on podcasts, moderated webinars, and am about to start a short documentary course at University College London. Below, I'm including a few pitches for WIRED.

- **Surveillance is seamless. What if it wasn't?**
  - *Getting accustomed to being watched has been easy. Being reminded that you're being watched, and for what purpose, could be harder to stomach.*
- **Venezuelans' tech toolbox to fight the regime includes AI avatars**
  - *Electronic voting systems, AI avatars, and social media have all kept a democratic movement alive despite the circumstances.*
- **AI deepfakes are all over your HR training videos**
  - *The lady telling you what to not say at the Christmas party is probably a not real. Thanks Synesthesia, the company behind the shift.*
- **Supermarkets are releasing GLP-1 friendly foods. You might be getting scammed**
  - *Are GLP-1 'specific' foods just an excuse to charge more for less?*
