

Cutting-Edge Surgery Without All the Cutting

Reduced Pain and Minimal Scarring are Realistic Results for Many Women

Laparoscopic and robot-assisted surgeries make tiny incisions, which can mean smaller scars, less pain, and quicker recovery times. These minimally invasive options are available for many gynecologic procedures, including most hysterectomies.

We are the only hospital within XX miles of Frederick offering the latest in robotics technology including the *da Vinci*® Surgical System. This system allows our highly trained surgeons to perform even the most complex and delicate procedures through **VERY SMALL, 1-2 cm**, incisions with unmatched precision.

For further information please contact our Women's Health Navigator at 240-215-1447 or visit our website at fmh.org.
