

Enterprise Software and Services For the Data-Driven

Empowering you to break down barriers with data to make faster, smarter decisions

We're a fast-growing enterprise software and services company that has been around for over fifteen years. As a recognized leader in the supply chain, data analytics, and AI spaces, we provide innovative solutions and services that help organizations achieve real value today and sustain it for the future.

The COE Difference: Why customers choose us?

We don't just partner with IBM, Tableau, Salesforce, and other leading organizations—we act as an extension of them. Combined with our deep passion and expertise, we deliver measurable results by solving real business problems, streamlining workflows, and empowering people.

How we can help

Syncrofy: The AI-Enabled Supply Chain Platform

Our powerful SaaS-based platform enhances existing IBM solutions, specifically B2B integration. Syncrofy consolidates B2B data and provides transaction and full order lifecycle visibility at the line-item level in an easily readable format. It empowers users to visualize data, discover problems before they occur, and collaborate with internal teams and trading partners.

B2B/EDI integration & managed services

Our deep services capabilities span the design, implementation, and management of your entire EDI/B2B and integration ecosystem—from Sterling to hybrid cloud. We support everything from onboarding and mapping to monitoring and ongoing optimization to ensure reliable data exchange across trading partners and systems. With deep expertise across B2B integration, EDI, managed file transfer, application modernization, and cloud migrations, we deliver projects faster, with fewer resources, and better outcomes.

SureStock: AI-powered inventory optimization

SureStock helps you take control of inventory with AI-driven forecasting built to reduce uncertainty and prevent stockouts. By analyzing key data points—from sales and inventory levels to POS and demand signals—SureStock predicts what you'll need and when, so you can keep the right products available at the right time. Proactive insights into potential shortages and demand shifts empower your teams to act early to avoid lost sales, improve forecast accuracy, and maintain optimal inventory levels.

Syncrofy File Transfer (FT)

Syncrofy File Transfer (FT) delivers end-to-end monitoring of file movements across systems to provide real-time insight into file status, performance, and exceptions in an easily readable format. With AI-powered anomaly detection and automated notifications, you can identify issues before they impact operations, prevent delays and compliance risks, and collaborate with internal teams and partners to avoid costly penalties.

IBM webMethods & hybrid integration

We have deep expertise integrating IBM webMethods B2B with enterprise systems and Syncrofy to connect reliable transaction processing with business-level visibility and intelligence. We enable seamless data flow across applications, partners, and environments to bridge on-premises and cloud systems through a scalable, secure integration framework. Combined with Syncrofy's AI-driven visibility, you'll gain an end-to-end view of your supply chain operations and the ability to turn transactions into actionable insights.

WatchDog: Snowflake optimization & cost control

WatchDog delivers real-time visibility into your Snowflake environment so you can stay ahead of performance issues and rising costs. It continuously monitors usage while surfacing actionable insights that help you optimize workloads and eliminate inefficiencies. By identifying high-credit consumption, misconfigurations, and cost drivers early, WatchDog enables you to fine-tune performance, strengthen governance, and reduce unnecessary spend before it impacts your business.
